

Share Your Knowledge

If you are an expert in your field of electronics, why not share your knowledge with the world?

Electronics For You invites electronics professionals and industry experts to write articles on their area of expertise and interest from different perspectives

Some of the topics we want you to write about are:

- Photonics: Optics & Optoelectronics
- Automation
- Power Electronics
- Components
- Telecom

So if you have an interesting topic or original article to share, please let us know at efyeditorial@efy.in

We would love to hear your good ideas too!

FOR YOU

Cameras can be an essential consideration point as well. Top-end phones are expected to deliver cameras as good as these come. Rear cameras are now available in capacities of 24MP or even higher. Some companies are offering dual rear cameras. Front cameras also come with 13MP specification. Lens quality and build of the cameras can generate high-quality images.

You should also look for a range of smart features that are often the USP of the products on offer. A strong AI suite, high-quality display (preferable up to ultra-HD resolution), innovative security applications (face recognition, biometric sensors, etc) and other such features can give you the satisfaction of owning a power-packed device.

What to buy

Now we get to the big question: Which smartphone would be a good purchase? Looking at all flagship phones available in the market today, the choice becomes tough. So, here are some of the best top-end smartphones you can choose from.

Samsung Galaxy S9+. Samsung's flagship phone Galaxy S9+ is a fresh release. It was under a lot of speculation and discussion until it was officially launched earlier this year. In the Indian market, S9+ launched with Exynos 9810 processor, while in many other global destinations, it features Snapdragon 845. As discussed earlier, both processors are still strong and almost similar in performance. S9+ is packed with a powerful 6GB RAM,

3500mAh battery and runs on Android 8.0 Oreo OS. The 15.75cm (6.2-inch) AMOLED screen is of quad-HD resolution (2960x1440), with curved edges. The dual-SIM phone carries an SD slot, which can support a memory expansion of up to an amazing 4TB.

The front camera has a capacity of 8MP, while there are two rear cameras, each delivering 12MP capacity. The aperture is adjustable between f/1.5 and f/2.4 based on available light. The camera delivers the interesting USP of ultra-slow-mode video recording at 960 frames per second. The features of augmented reality (AR) emoji (which is to use an animated emoji of the user), upgraded version of Bixby AI suite and a face-and-iris recognition system make this phone a great device. It starts at ₹ 64,900.

Google Pixel 2 XL. After a successful run with Pixel, Google returns with an upgraded iteration, Pixel 2 XL. It features a 15.24cm (6-inch) screen with 2880x1440 pixel resolution. The Android Oreo 8.0-run device comes with a 1.9GHz Snapdragon 835 processor with Adreno 540 GPU and 4GB RAM. There is a 12.2MP rear camera and 8MP front camera. The device is powered by 3520mAh battery. The cameras can record videos up to 2160 pixels. The fingerprint sensor on the device allows you to biometrically protect it. Pixel 2 XL supports a single SIM. The hardware design is stylish yet ergonomic. The phone is priced at ₹ 58,500.

OnePlus 5T. OnePlus has been quite consistent with the products they have been bringing to the market. They
