

SMART GLASSES: DIGITAL EYES TO LOOK AT THE WORLD

Paromik Chakraborty

The *Terminator* and *Iron Man* movie series always made me wish for glasses that would pop out digital readings. Today, that has become a reality. We now have smart eyewear that can assist us in different walks of life including various daily activities, sports, healthcare and so on. In this article we look at some of the coolest glasses that are giving us a smarter glance at the world.

Your daily assistant

If you are looking for something to assist you with your day-to-day activities, an attractive and feature-packed option is Vue smart glasses. Receiving good response on Kickstarter and BackerKit campaigns, this wearable is now ready for pre-order. Powered by ARM Cortex processor, Vue offers a number of smart features such as health monitor, walk recorder, calorie measurement, distance measurement, navigation assistance and more. All this data, after being captured, can be viewed

on Vue's proprietary mobile application (which supports Android as well as iOS). The glasses also alert you of incoming calls or messages via a blinking LED and let you answer calls hands-free. Vue smart glasses include Bluetooth modules to connect to your smartphone.

An interesting technology used in Vue is for audio transmission. The in-built speakers deliver high-quality audio without the need to plug it into your ears, via bone conduction. This technology allows the sound to travel across frame handles directly through the ear bones. Consequently, you can use it to receive voice-assisted navigation routes or listen to your favourite tunes without compromising your safety on the road.

The sides of the frame come with gesture-based controls for various operations. These gesture-based operations can be assigned or changed via the mobile application.

Another fun feature of Vue is that it comes with a portable charging case to
