

charge it on-the-go. The battery works up to seven days after being charged.

Vue is waterproof and comes in three iterations: plano, sunglasses and prescription-based. The pricing starts at US\$ 249 (approx. ₹ 16,200).

The cycling companion

Cycling enthusiasts and tech-lovers alike can find a great partner in Eversight's Raptor eyegear. The sturdy, weather-resistant smart glasses provide health and ride statistics when active. It is powered by Qualcomm Snapdragon 410E processor on Android 5.1.1 OS. You can view all the information on a high-brightness OLED display, powered by the company's proprietary Beam technology to ensure display clarity.

Data like navigation route, duration of ride and heart rate, among others, are recorded and displayed by Raptor. There is an interactive touchpad on the right side of the glasses that can be used for various actions and settings.

An in-built 13.2MP camera can capture HD images and videos. Addition of in-built speakers to the side, which can run stored playlists, adds to the appeal. The in-built battery keeps it running for up to nine hours.

Voice commands commence specific actions like controlling the camera, adjusting the volume of the speaker or brightness of the display. This becomes highly beneficial as it gives hands-free control while riding.

Raptor provides interchangeable visors. It can also be controlled from a separate wireless controller (to be bought separately), which compactly fits on the cycle handle-bar. You can set up Raptor from the associ-

ated mobile application. For those using prescribed lenses can purchase an RX lens adaptor to use with Raptor.

Raptor can be pre-ordered. It comes in two models: 16GB and 32GB. The price starts at US\$ 499 (approx. ₹ 32,400).

For the augmented reality experience

Epson has created their own consumer-oriented smart glasses in the form of Moverio BT-300. This quad-core Intel Atom processor-powered wearable houses 2GB of RAM and runs on Android. The display lens is made of silicon-OLED material with 720p HD resolution. An internal storage of 16GB is provided by default. The

glasses provide various information about your surroundings and environment like route, distance, temperature, humidity, weather conditions and other similar data.

Main operations are done through a controller puck, attached along the headset via a wire. The puck contains the power button, trackpad, navigation keys, volume key, volume key and more. It has an expandable microSD slot (up to 2GB SD and up to 32GB SDHC), micro-USB connector

and headphone jack. An in-built 5MP camera can click images and videos. BT-300 has support for Wi-Fi and Bluetooth protocol as well as Miracast casting technology.

A proprietary mobile application (compatible with Android as well as iOS) helps to seamlessly set up BT-300. BT-300's battery provides operation up to six hours after charge. An interesting product for all category of users, Moverio BT-300 is available for US\$ 779 (₹ 50,600).

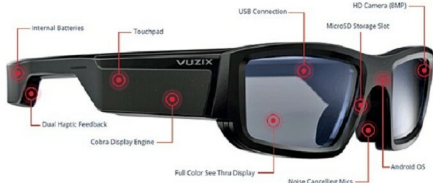

The premium one

Revealed at Consumer Electronics Show (CES) 2018, Vuzix Blade is a smart eyewear that can be a game-changer in the domain. It is aimed towards consumers and enterprises alike with a massive host of features. Processing capacity of the Android-based gear is powered by a quad-core ARM unit.

Vuzix Blade has Wi-Fi and Bluetooth connectivity support. It can store files in a microSD card through its expansion slot. A gesture-supported touchpad allows you to configure its settings. Sensors can sense head motion and deliver haptic-based vibrations. Through Bluetooth as well as a micro-USB audio jack, it can connect to earphones or headsets.

The right lens has a full-colour display that can show required data and settings. An interesting addition is an 8MP HD camera, which can capture images and videos, and store these on the memory card.

The USP of Vuzix Blade is the integration of Alexa voice assistant, which enables the wearable to be voice-controlled. It supports multiple languages, too. You can access the features through a mobile application as well, which is compatible with both Android and iOS smartphones. The lens can be changed based on prescription. Blade is up for pre-order on their website and comes with a price tag of US\$ 1000 (approx. ₹ 65,000). **EFY**
