modern technology can offer. You can use the fingerprint sensor in the briefcase to unlock and access it. Alternatively, you can use your mobile to wirelessly access the case. You can also use the conventional Kensington lock for better reliability. What makes it even safer is a loud alarm system that turns on in case of unauthorised or forced attempt of unlocking the briefcase.

The briefcase has an in-built GPS tracker, which can be viewed over a mobile application. This feature lets you immediately track your briefcase if you mistakenly leave it behind. You can also refer to your navigation history through this feature.

The briefcase also comes with a built-in wireless data storage facility. You can charge your phone on-the-go with the in-built battery of the briefcase. If you want to use the phone, plug it into the external USB port. To keep it inside the briefcase, use the internal USB line. You can choose to add another battery pack to charge your laptop as well.

Get down to business whenever you want

If this trip is going to be a busy one, GCase can give you constant easy access to your work-related data. It

has an integrated camera for recording important meetings and discussions. You can revise those recordings or get a glimpse of the time, weather or even the stock market on the 15.2cm (6-inch) screen fitted on the case. The built-in 1080p projector allows you to make presentations anywhere. You get digital locks that can unlock from your mobile. All these digital facilities are smartly configured to your smartphone, so you need not handle the equipment manually. Carbon-fibre body makes the briefcase very durable

for your 38cm (15-inch) laptop, which can be removed to make space for more items. There are external USB ports and an internal powerbank to charge your smart devices on-the-go.

More interestingly, you get an address tag with the briefcase that also acts as a multi-tool kit containing a screwdriver and parcel opener. The briefcase handles are exchangeable with side-slings. Anti-scratch, water-resistant and fireproof leather, framed on a carbon fibre skeleton, keeps the briefcase safe. You can check the briefcase out at the Kickstarter website.

Stay in style and never lose a thing

If you are carrying too many small essential items, you should pick a briefcase that can trace them in case they get misplaced. Mr. Fox's smart bag provides RFID tags for the bag itself as well as for some of your crucial belongings. This can help you track your bag or other such items using your smartphone if you cannot find them. You even get an RFID keychain. An internal power-bank charges your electronic gad-

and absolutely impenetrable.

Are you seeking flexibility?

If you have more plans, other than just official meetings, Wingcase, built by the German design team Studio Dessau, can come handy. This flexible carry case can also become your over-night-travel side-bag with a modular setup. The bag contains a separate compartment
