

DESKTOP, LAPTOP OR CONSOLE: WHICH ONE FITS YOUR GAMING NEEDS BEST?

Paromik Chakraborty

Your old gaming laptop just died, and you are planning to get a new system.

But you cannot make up your mind whether you should get another laptop or shift to a desktop computer? Or maybe, it is time to get your hands on one of the Xboxes.

The decision can be hard, especially when you have not experienced all three setups. However, a few consideration points can help make the choice easier.

Cost

Judging by the price points and performance-to-affordability factor, gaming consoles turn out to be the most cost-effective option. Modern-day consoles like PlayStation (PS) 4 or Xbox One are available within a range of ₹ 30,000 to ₹ 40,000 (the top range provides highest performance including 4K gaming). In the

box, apart from the console itself, there is a controller, a few essential cables and, if you can crack a good deal, you may get a set of the latest games as well. An additional expense is a suitable TV or a monitor-speaker system—if you have a modern LCD TV with HDMI support already, this expense is off your list!

Cost of a desktop computer varies with the internals you choose. Casual gamers may settle for a moderate configuration available at a reasonable cost. But serious gamers do not mind investing in something that can run any game that
