

Fujitsu Non Volatile Storage Randomly Accessible FRAM (Ferroelectric RAM)

FRAM makes use of Ferroelectric film to store the data. The ferroelectric film is polarized to a "0" or "1" state when voltage is applied and remains stable in the state even when the voltage is removed.

This phenomenal makes FRAM a good candidate for use in GREEN products as it is low power and battery is not required.

Target Application

Comparison of FRAM with another memory device

	FRAM	EEPROM	FLASH	SRAM
Memory Type	Non-volatile	Non-volatile	Non-volatile	Volatile
Write Method	Overwrite	Erase+Write	Erase+Write	Overwrite
Write Cycle Time	150ns	5ms	10µs	55ns
Read/Write Cycles	10 ¹³	10 ⁵	10 ⁵	Unlimited
Booster Circuit	No	Yes	Yes	No
Data Backup Battery	No	No	No	Yes
