Impact Of SMART WORKPLACES On ENHANCED Employee PRODUCTIVITY

► While the right light with the best-in-class LED system is the base today, a connected lighting system can enable companies to benefit from space optimisation, HVAC integration and cleaning schedule optimisation, and enhance overall employee productivity

Most of us spend eight to ten hours in our workplace every day. These are also our most productive. Considering this fact, employers, developers and investors are now focusing on making work hours the most resourceful. Most organisations spend about 90 per cent of their operating capital on the well-being of their employees. Even a change of two per cent to that capital can cause a major impact on the organisations' overall performance.

So, what do organisations expect

from their employees? The answer is simple. To be the most productive while in office! Hence, employees' health and well-being take priority with the management. An ideal workspace comprises three key aspects: environment of the workplace, which includes lighting, sound, interiors, thermal comfort level and so on; optimised experience for each employee and economics of creating the ideal workspace.

Sukanto Aich, senior director, Philips Lighting India, emphasises the importance of lighting in creating the

much-needed conducive workplace environment. He says, "Lighting today is more than just illumination. While the right light with the best-in-class LED system is the base today, a connected lighting system can enable companies to benefit from space optimisation, HVAC integration and cleaning schedule optimisation, and enhance overall employee productivity. All this links to a much larger impact on brand equity.

"It is extremely important for organisations today to focus on scal-
