Indian security and surveillance market is at a fascinating stage. We are moving from security in closed spaces to security of public places. This has led to spending from both government and the private sector

The global security and surveillance industry has grown in importance owing to the growing importance placed on safety and well-being, both in residential and commercial sectors. Significant rise in security threats has propelled governments from different countries to prioritise the development and adoption of advanced surveillance techniques. Growing crime rates and increasing instances of security breaches across the world, leading to massive loss of human life and assets, are the major drivers of the electronic security market.

With the common purpose of detecting, monitoring and recording intrusion, security systems can be as elementary as a video camera or as complex as a biometric system. Digital surveillance techniques in the form of closed-circuit television (CCTV) cameras, burglar alarm systems and access control systems have become household names. Intellectual property (IP)-based surveillance technology, touted as the future of surveillance systems, has replaced closed-circuit analogue systems, which, until recently, predominantly dominated the security market. The surveillance industry can be broadly classified into four major segments as outlined in Table I.

According to a report by Markets and Markets, the video surveillance market, which was valued at US\$ 30.37 billion in 2016, is projected to cross US\$ 75 billion by 2022, at a compound annual growth rate (CAGR) of 15.4 per cent between 2017 and 2022. Likewise, a report by Business Wire states that the intrusion detection systems market is expected to grow from US\$4.12 billion in 2016 to US\$5.82 billion by 2021, at a CAGR of 7.1 per cent.

A research conducted by Technavio classified the wireless video surveillance (WVS) market into three key geographical regions. It was reported, that the Americas accounted for 41.96 per cent of the total WVS market in 2016, the APAC countries 23.01 per cent and the EMEA regions 35.03 per cent, as shown in Fig. 1. Major players in the industry are Bosch Security Systems, Cisco Systems and Hangzhou Hikvision Digital Technology. The most common form of security and surveillance technique across the globe is video surveillance systems, which was worth US\$ 15 billion in 2016.

Market perspective

The security sector has witnessed tremendous growth since 2010 and is expected to continue through 2020.

The fear of terrorism and crimes like theft and vandalism,

TABLE I
BROAD CATEGORIES OF SECURITIES INDUSTRY

Market classification	Definition	Examples
Access control market	Performs authorisation identification, authentication, access approval and accountability of entities through login credentials	PIN numbers, smartcards, biometric scans, electronic keys
Intrusion alarm system	Detects the presence of intruders at premises, triggers a local siren to deter activity and, simultaneously, communicates the event to a security-monitoring centre so that appropriate response can be coordinated	Burglar alarms, fire alarms, motion detectors, smoke detectors
Video surveillance market	A security technique for monitoring and observing a particular area through video cameras	CCTV cameras, outdoor perimeter security
System integrated market	An integrated security system that allows a company's multiple forms of security operations to become centrally managed	Mainly used in corporate offices, shopping malls, hospitals
