

Wireless modules

Silicon Labs offers Wireless Xpress solution to help developers get IoT applications connected and running in a day, with no software development necessary. Silicon Labs' Wireless Xpress provides a configuration-based development experience including certified Bluetooth 5 Low Energy and Wi-Fi modules, integrated protocol stacks and easy-to-use tools.

MISCELLANEOUS

Employee time tracking system

COSEC VEGA FAX is specifically built for demanding enterprise to meet the functional needs of an organisation's

employee time tracking system along with access control applications. The device offers unique advantages in terms of connectivity, technology, usage environment and ease of use. IP65, PoE, touchscreen and wireless connectivity offer fool-

proof access control and time attendance solutions for corporate firms, manufacturing units, government organisations and more. It has various interfaces like exit reader, exit switch, auxiliary input/output port, Ethernet and Wi-Fi.

Matrix manager IC

Designers of high-performance automotive matrix lighting and adaptive driving beam LED applications can now migrate to higher-current devices while reducing solution size and improving flexibility with MAX20092 12-switch matrix manager from Maxim Integrated Products. The IC minimises thermal issues associated with LED matrix lighting applications by offering an internal switch resistance (R_DS_ON), which is 65 per cent lower than the closest competitive solution.

Sealants

The sealants are formulated for application in assemblies requiring flame retardancy. This low-odour material is UL-recognised and complies with testing requirements of UL 94 V-0, a vertical burn test that evaluates self-extinguishing characteristics.

Dosing pen

With eco-PEN330, dosage quantities from 0.002ml are possible, independent of temperature, time, pressure and viscosity, as dot or bead application. The microprocessor-controlled system produces a dosing accuracy of ± 1 per cent and repeatability of more than 99 per cent. The continuous bead application rate is maximum 3.3ml/min.

Power supplies

Traco Power has announced the release of their TPP 100A-J and TPP 150A-J series of 100W and 150W open-frame power supplies. Their high efficiency topology, industrial-grade components and advanced thermal management enable -25°C to $+85^{\circ}\text{C}$ operation, compliance to IEC 60068-2-6/IEC 60068-2-27/MIL-STD-810F for shock and vibration, and reliability in excess of 785k hours supported by five-year warranty.

GPS module

Ramakrishna Electro Component has launched its own GPS module, under UTRAQ brand, which runs on Indian satellites. UTRAQ is an endeavour to replace current GPS application that works on American or Russian satellites. The module is IRNSS-compliant for VTS application. IRNSS is a gov-

ernment of India initiative under ISRO. IRNSS user receiver module is integrated with front-end chipset and

embedded high-performance ARM9 processor. It has internal SRAM, UART, USB, CAN and 10-bit ADCs.

Liquid level controller

RS Electronics offers an electronic liquid level controller for automating pump sets. This is suitable for conductive and non-conductive liquids. However, the choice of level-sensing probes adds limitations. Whenever water/liquid

level in the overhead tank falls below the set low level, the device operates the pump set and stops it when the water level rises to the set high level to avoid overflow. It can also be used for underground tanks (reservoirs).

Magnetic float switch

A float switch is an electrical on-off switch that operates automatically when the liquid level goes up or down with respect to a specified level. The signal available from the float

switch can be utilised for automatic control of pump or allied elements like solenoid, lamp, relays and so on. Magnetic float switches from MRK Engineers are available in a very wide range according to operating and mounting methods to suit a variety of applications.
