Tor browser comes to Android

Tor browser has made its debut on Android and is available in alpha mode through Google Play Store. The development comes a long time after The Tor Project brought its proxy app Orbot and standalone Orbot-powered Web browser, Orfox. Unlike a traditional Web browser, Tor by default blocks users' identities while browsing the Web. It also helps them block access to their current location and passes the traffic over Tor network.

Google launches Touring Bird, a new travel guide

Google's in-house startup incubator Area 120—workshop for experimental products—has introduced a travel guide website called Touring Bird that lists tours, attractions and activities for travellers and tourists in popular travel destinations. So far, the website provides information about 20 cities including New Delhi, Prague, Chicago, Amsterdam, Barcelona, Berlin and Las Vegas, among others. The app comes with build-your-own package feature, wherein users can customise and compare filtered offerings by price and preferences, to find the best match to their plan, along with booking and cancelling

provisions. They can also bookmark their favourite activities and recommendations for food, destinations, stays and amusements, to a list and share it with fellow travellers.

iPhone app to accurately monitor blood pressure

Developed by Michigan State University researchers, an iPhone X app measures blood pressure via the oscillometric finger pressing method, which enables users looking to open functions and apps with a simple push of their finger. The user has to press his or her fingertip on both the front camera and screen to increase the external pressure of the underlying artery. The app measures the resulting variable-amplitude blood volume oscillations via the camera and applied pressure via the strain gauge array under the screen. The app also visually guides fingertip placement and actuation, and then computes blood pressure from the measurements, just like automatic cuff devices.

Microsoft's Your Phone app releases in Windows 10

Microsoft has announced the release of Windows 10 October 2018 update and is making Your Phone app available to all users. The app supports app mirroring on Android, giving users access to their texts and photos on a computer, using drag-and-drop feature. The company is also planning to add support for text messages sync and notifications from Android phones to mirror to a PC in the future.

The prices, features and specifications are based on information provided to us, or as available on various websites and portals. EFY cannot vouch for their accuracy.

"Next time I want this exhibition to be inaugurated by a robot or through video-conferencing. This will make my country more developed!"

"This is an electronics class. The world is getting smarter. So if you want to make noise, do not do it manually; use your cellphone instead!"
