

How To Set Up A Business Unit For Manufacturing SURROUND SOUND SYSTEMS

Research Team,
ComConnect
Consulting

Demand for surround sound systems is increasing rapidly with more people opting to convert their living room into a home theatre for better audio-visual effects

A surround sound system is a multiple-channel audio system that gives the same effect of a movie theatre sound in a room. In the basic form, besides normal stereo channels, it adds a centre speaker at the front to enhance sound clarity and rear speakers to add depth for ambience and special effects.

Surround sound expands the spatial imaging of audio playback from one dimension to two or three dimensions. This effect can be achieved by processing an existing stereo (two-channel) soundtrack to add the feel of spaciousness and make it appear as if it originated from outside the left/right speaker locations, which provides a more realistic audio environment. In the surround sound system, one can experience different parts of the soundtrack coming from different directions.

Generally, a home theatre system is designed to recreate the experience of watching a movie in a theatre. It produces more audio-visual effects

Business compliances

In the beginning, as a manufacturer, apply for different registrations and licences from the relevant government authorities. However, it is advisable to check the state law.

- Register the business with Registrar of Companies (ROC).
- Apply for trade licence from the local municipal authority.
- Apply for MSME Udyog Aadhaar for small- and medium-unit operations. This can be registered online.
- Obtain NOC from Pollution Control Board. First, apply for Consent to Establish and then Consent to Operate.
- Apply for GST registration.
- Protect brand name with trademark registration.

than an ordinary TV. A surround sound system makes the home theatre experience complete.

Demand for surround sound systems is increasing rapidly with more people opting to give their living room the ambience of a movie theatre through better audio-visual effects. It is not just music and movies that benefit; sports, drama and other programmes also become more involved, giving a genuine sense of actually being there.

Market potential

Growth of smart homes is one of the primary growth factors for the home theatre market. Smart homes are equipped with connected devices that communicate with each other and provide an enhanced consumer experience. Vendors are offering enhanced home theatre systems equipped with assistant functionalities for smart homes. Latest home theatre systems are being equipped with digital assistants like Alexa or Google Assistant, which make voice assistance possible.

Media streaming devices like Google Chromecast are connected to a high-definition multimedia interface (HDMI)-equipped receiver. Receivers or speakers inbuilt with
