COMPONENTS

TRIACs

Littelfuse has introduced six series of high-temperature sensitive, standard and alternistor TRIAC, designed for

use as semiconductor switches in appliances and equipment powered by line AC voltages up to 220V RMS.

These components are well-suited for Internet of Things (IoT) applications that require compact design but do not involve continuous high currents, such as smart doorbells, thermostats, ceiling fans/lights and door locks.

Ac-to-DC converters

With its RAC05-K/277 series, Recom introduces 5W AC-to-DC converters that are specially designed for extended input

lines and reliable operation at extreme temperatures from -40°C up to +90°C.

The series is built to operate from extended input lines with mains voltages from 85V AC up to 305V AC, are EMC-compliant to EN55022 class B with minimum 6dB margin on both radiated and conducted readings without the need for external components.

Gate driver IC

Infineon Technologies has introduced IRS2007S 200V half-bridge gate driver integrated circuit (IC) in a stand-

ard SOIC-8 (DSO-8) package. It is tailored for low-voltage (24V, 36V and 48V) and medium-voltage (60V, 80V, 100V and 120V) motor control applications in battery-driven devices. These are typically found in

power tools, household and garden equipment, as well as in light electric vehicles and drones.

Surge protection device

RBE10 surge protection device is designed for use in outdoor and commercial lighting applications as well as for industrial electronics control

cards protection. These devices use a combination of high energy and thermally-protected varistor technology

that incorporates fail-safe operation of devices under hazardous voltage transients. RBE10 series has options for both series and parallel connections.

Power monitoring IC

Allegro MicroSystems has released a fully integrated, small form factor, power monitoring IC with

reinforced voltage isolation. ACS71020 builds upon Allegro's hall-effect current sensor IC technology by adding line voltage sensing (to voltage levels > 500V RMS) and a dedicated metrology engine that digitally calculates detected power levels.

Power management IC

Analog Devices has announced Power by Linear LTC3372, a highly integrated power management

solution for systems that require multiple low-voltage outputs generated from input voltage as high as 60V. LTC3372 features

a 60V synchronous buck switching regulator controller, followed by four configurable synchronous monolithic buck regulators. This provides up to five high efficiency, low quiescent current outputs in a single IC.

Fuel-gauge ICs

Designers of lithium-ion battery-powered portable devices can improve end-user experience by extending run-time and delivering the most accurate battery state-of-charge data with MAX17262 single-cell and MAX17263 single-/multi-cell fuel-gauge ICs from Maxim Integrated Products. MAX17262 features 5.2µA quiescent current along with integrated current sensing. MAX17263 features 8.2µA quiescent current and drives three to twelve LEDs.

TEST & MEASUREMENT

Fibre-optic cable tester

Anritsu has introduced Access Master MT9085 series of handheld testers

that provides accuracy and broad measurement capability during installation and maintenance of fibre-optic cables in LTE and 5G backhaul, as well as metro and core networks. It incorporates a 20.3cm (8-inch) colour touchscreen for enhanced operation, as well as integrates Anritsu's fibre visualiser as a standard feature.
