

tion. It can measure and display impedance, voltage, temperature, current and capacity of a battery. AC (four-terminal) method is used to measure internal resistance by eliminating lead and contact resistances to obtain accurate results.

Digital clampmeter

MECO-G introduces a digital clampmeter (model R-2070C) featuring 6000 counts, true-RMS AC current and measurement with backlight LCD display. This instrument can measure AC-to-DC voltage, resistance, capacitance, temperature and frequency. Special functions include tests for hFE, diode, duty cycle and audible continuity.

Thermometer

Extech 401014A big digit thermometer simultaneously displays indoor and outdoor temperatures, along with user-programmable high and low alarm for outdoor (external probe) temperature. Its wired external weatherproof probe with a three-metres long cable can be installed through a window, door or any small opening leading to outdoors, or inside a refrigerator/freezer or temperature-controlled areas/room. Internal memory stores minimum/maximum readings over time.

MISCELLANEOUS

Software expansion for MCUs

I-CUBE-LRWAN expansion package consists of a set of libraries and application examples for the full portfolio of STM32 microcontrollers (MCUs), including the ultra-low-power STM32L0, STM32L1, STM32L4 and STM32L4+ series MCUs

for IoT end-devices. With security being a growing concern among IoT developers, the libraries include a dedicated application programming interface to manage secure elements, such as STSAFE-A product family, and enable a range of data-protection capabilities.

Electronics project kits

Mega-Kit provides ready-to-assemble project kits. Detailed theoretical descriptions explaining the circuits step-by-step in a simple language, functional block diagrams, green masked glass epoxy PCBs with components layout with indents marked on component side and complete component list are some features of these kits.

LED lamp bulb

Binay's InstaFit LED high bay light bulb is a plug-and-play, retrofit replacement for conventional metal halide lamps. Key features include:

- Direct replacement for metal halide lamps (400W/350W/320W/250W) in E39/E40 base
- Consumes approximately 175W power
- Up to 16,000 lumens light output
- Saves 60 per cent energy
- Instant on/off; no arc tube re-strike timeout
- Life of more than 50,000 hours
- Greater than 80 CRI, CCT 4000K, 5000K and 5700K

Communication solution

Matrix SARVAM UCS is an enterprise-grade unified communication solution that offers collaboration, communication, messaging and mobility. It brings

users from multiple locations to a common platform. They have the option of using either Matrix SPARSH desk-phones or Matrix VARTA applications on their

smartphones or tablets.

AI unit solution

The artificial intelligence (AI) unit solution is one of Renesas' embedded AI (e-AI) solutions for manufacturing equipment that makes it possible to adopt AI in endpoint embedded equipment. Because of this testing, it has been verified that production yield in the applicable process can be increased up to 99.5 per cent by reducing unsatisfactory items, and that this technology is capable of significantly improving productivity.

Intelligent high-power system

Artesyn Embedded Technologies has announced an extension to its iHP series configurable intelligent high-power system, with the addition of a 12kW case to the existing 24kW case. The new case provides a lower cost and smaller option for applications needing up to 12kW in 3kW increments. It can be configured for up to four outputs using a wide variety of plug-in modules, addressing a large range of voltages and currents.

Breath analyser

KT-6000C offers precise and quick breath alcohol analysis in a user-friendly and compact form. Key features are:

- Electrochemical/fuel cell sensor, high specificity to alcohol, unaffected by other possible breath contaminants
- 240 x 320 TFT LCD touchscreen provides intuitive operation
- Three buttons simple test operation system
- Evidential and screening test modes
