

Monitor

Designed for professional photographers

BenQ launches SW240, the latest addition to its SW PhotoVue family. SW240 is a 61cm (24-inch) 1080p 10-bit IPS display, designed with photo editors in mind. It boasts of 99 per cent Adobe RGB coverage, 95 per cent DCI-P3, 14-bit 3D look-up table, hardware calibration, advanced black-and-white mode and colour mode hotkey for switching between Adobe RGB, sRGB and DCI-P3 while editing.

Featuring BenQ's AQCOLOR technology, SW240 provides out-of-the-box, factory-calibrated colour accuracy with colour space to bring brilliant colours to life. The monitor's hardware calibration adjusts its image processing chip rather than graphics card output. This ensures that the images stay consistent with their original copies.

SW240 features edge-to-edge ultra-slim bezels. Palette Master Element software allows easy tuning and maintenance of the colour performance of the monitor at its most optimal state. Eye-Care technology reduces eye fatigue for user comfort, enhanced productivity and workplace safety during extended use.

NavIC, India's own GPS

India's own GPS is set to be launched soon. It will be placed in the club of select countries that have their own indigenous navigation systems. The Indian Regional Navigation Satellite System (IRNSS), with an operational name of NavIC (Navigation with Indian Constellation), is currently being tested for accuracy. India needed a constellation of seven satellites in space to complete IRNSS, a feat the country achieved on April 28, 2016, when Indian Space Research Organisation successfully launched IRNSS-1G, the seventh satellite in the series, and guided it to orbit.

An app for comparing reference images of PCBs

Tagarno has developed an app for its digital microscopes, which enables users to capture an image of a golden sample to match next to a live screen image of a circuit board or captured sample image. The app can be used to perform quality control of circuit boards after component placement or reflow. By comparing PCB samples to a reference image of a golden sample in various ways, it enables operators to efficiently catch mistakes and

misplaced components in time. A mouse and keyboard connected directly to the microscope is enough to control a variety of features displayed on the monitor.

LALA World launches blockchain-based payments app in India

Singapore-based FinTech organisation LALA World has built a global digital decentralised financial ecosystem powered by artificial intelligence (AI) and blockchain. Through this app, users can carry out a wide range of utility bill payments and recharges with a wide array of service providers. The company's vision is to support financial inclusion of micro-entrepreneurs, unbanked, migrants and refugees around the world.

Paytm launches own AI cloud for India

One97 Communications, the parent company of Paytm, has launched its own AI cloud computing platform, Paytm AI Cloud, for India. Aimed at developers, startups and enterprises, the platform offers business-centric apps for organisations that need high-quality solutions for cloud computing, automating their workflow, easy payments, messaging and customer engagement without the hassle of managing hardware and software.
