

Domestic manufacturing of handsets helps India save ₹ 3 trillion

Backed by the government's Make in India initiative, the mobile handset manufacturing ecosystem in India has helped the country save a whopping ₹ 3 trillion over the past four years.

This has been made possible by replacing imports of completely-built units with locally manufactured and assembled handsets, an India Cellular and Electronics Association

report stated.

The report added that in the last four years, India's mobile handset and components manufacturing industry has witnessed the establishment of more than 120 new manufacturing units, generating employment for over 450,000 people. In 2018-19, mobile handset manufacturing will create a value of ₹ 1.65 trillion from 290 million units.

West Bengal unveils IT and Electronics Policy 2018

West Bengal chief minister Mamata Banerjee announced the state's Information Technology (IT) and Electronics Policy at the launch of Bengal Silicon Valley hub in New Town near Kolkata. The announcement was followed by additional chief secretary (IT) Debashis Sen's declaration that the new policy will make West Bengal

one of the leading states in the IT sector in India.

The policy will be operative with immediate effect. It has a focus on 3D printing, big data analytics, animation and gaming, artificial intelligence (AI), the Internet of Things (IoT), robotics, cyber security, drones, fintech, Industry 4.0 and quantum computing, among others.

BHEL Trichy to make e-mobility products

Bharat Heavy Electricals Ltd (BHEL) Trichy has added electric mobility to its business portfolio as part of diversification measures. The process of prototype development and obtaining necessary certifications to foray into e-mobility has begun, to capitalise on emerging business opportunities.

According to official sources,

BHEL will aggressively focus on revamping its infrastructure and operations to manufacture e-mobility products. To address the growing needs in the mass transportation sector of e-mobility, it may take up large-scale production of non-conventional vehicles by utilising its expertise in heavy engineering and fabrication.
