Touch sense technology

Linepro has launched capacitive sense technology with different shapes. The reference image is of a curvature-shaped capacitive touch controller demonstrating touch sensing and control using cypress controller.

Unique features of this design are:

- Touch sense buttons, LED output and two switches mounted on flexible PCB
- Sensitivity of 5mm through glass overlay and up to 10mm through plastic overlay
- Manual touch sensitivity adjustment not required
- Ultra-low power consumption
- Liquid tolerance eliminates false touches due to wet conditions
- Strong immunity to noise
- Output of each button is taken on five-pin flexible strip; can be interfaced with end user application

Translucent epoxy

832C potting and encapsulating compound is a general-purpose, hard, translucent amber, two-part epoxy that offers extreme environmental, mechanical and physical protection for PCBs and electronic assemblies. It is designed for applications where visual inspection is required. Due to its low mixed viscosity, 832C can

832C can easily penetrate small gaps and cavities.

Dome camera

SATATYA MIDR20FL-28CWP 2MP IP IR professional dome camera offers the following benefits:

- Dark Observer; Sony STARVIS series sensor
- Crystal clear night vision; colour images at 0.08lux
- High-efficiency video coding: H.265 compression technology
- Vision Adaptive: True WDR 120db
- Eliminates blind spots with 113° view
- Adaptive streaming
- Records more frames during motion, less during no motion
- Analytics: intrusion, motion detection, no motion, trip wire

Twilight switch

ARtech's twilight switch is a low-cost, highly-reliable and compact switch designed for outdoor lighting of high wattages like floodlights, streetlights, hi-bays and more. The switch works on

ambient light sensor input and cuts off the connected luminary accordingly. It is connected in series with luminaries and switches it on in the evening and cuts off in the morning.

Lithium-polymer battery

Orange lithium-polymer batteries utilise an advanced LiCo nano-technology substrate that allows electrons to pass more freely from anode to cathode with less internal impedance—in short, lower voltage sag and higher discharge rates

than a similar density lithium-polymer.

Orange lithium-polymer battery packs are equipped with heavy-duty discharge leads to minimise resistance and sustain high current loads. Each pack is equipped with gold-plated connectors and JST-XH style balance connectors, and assembled using IR matched cells.

3D printer

RG 04 3D desktop printer, introduced in India by Rajguru Electronics, is a Kossel Delta 3D printer with metal frame and single extruder. It features with diameter 200 x 215mm build volume and 0.4mm nozzle. It allows easy printing of round models. To maintain the garage-built feel and handmade charms, RG 04 3D desktop printer is also a build-it-yourself kit.

Alignment system

Physik Instrumente has brought out a family of alignment systems designed for active alignment tasks in silicon photon-

ics and photonic IC market. The heart of every system is P-616 Nanocube, an XYZ nano-positioning stage with E-712 controller for high-speed and high-duty-cycle alignment tasks.
