

a single instrument. The new VXG microwave signal generator addresses the most demanding wide-band millimetre-wave (mmWave) applications for 5G and satellite communications by decreasing test set-up complexity and reducing path losses introduced in over-the-air (OTA) test environments.

Spectrum analyser

Anritsu has introduced Field Master Pro MS2090A RF handheld spectrum analyser. With continuous frequency coverage up to 54GHz, real-time spectrum analysis bandwidth up to 100MHz and a ruggedised design

to withstand the demands of field test, Field Master Pro MS2090A is ideal for a range of current and emerging field applications, including 5G, broadcast, regulatory compliance, aerospace/defence, satellite systems and radar.

Infrared camera

FLIR E4, E5-XT, E6-XT and E8-XT are powerful, cost-effective, easy-to-use troubleshooting tools for building, electrical and mechanical applications. With

four resolution options—up to 320 × 240 infrared pixels—and the ability to accurately measure temperatures from -20°C to 550°C (E6-XT and E8-XT), the Ex-Series has models to fit different target size, working distance, visual detail needs and budget. All models include MSX technology for extraordinary thermal imaging detail.

LEDs

White chip LED

ROHM has announced the availability of SMLD12WBN1W, a white chip

LED with 1608 (1.6x0.8mm) size that achieves class-leading reliability. This

package offers superior mountability and long operational life, which make it ideal for use in

display panels (for example, temperature control displays) in industrial and compact consumer equipment.

Spectral LED

This product incorporates nine short-wave infrared (IR) wavelengths for synthesis of commercially-available light sources or based on imported spectra. It features a spectral range from 900nm to 1700nm with illumination stability greater than 99.99 per cent across its 75mm output port. Illumination accuracy is NIST traceable to better than ±3 per cent with full-scale linearity better than 0.1 per cent RMS. Through its 16-bit DAC current drivers, users can achieve up to five decades of dynamic range adjustment with a spectral accuracy greater than ±2.5nm. The firmware includes full spectral calibration with spectral fitting, preset storage and real-time optical feedback.

MISCELLANEOUS

Power supplies

Artesyn Embedded Technologies has announced a series of power supplies following Intel Common Redundant Power Supply (CRPS) specification,

which includes a 2400-watt model, offering a power density of 75 watts per cubic inch (W/in³). With individual power

ratings from 550W up to 2400W, Artesyn's new CSU series provides makers of compute, networking and storage infrastructure in enterprise IT, cloud and hyperscale environments with power capacity flexibility.

Door controller

Matrix COSEC ARGO brings a modern design to access control and time attendance applications.

The device is equipped with an enhanced 8.9cm (3.5-inch) IPS LCD touch-screen for optimising users' visual experience. The door controller is designed to meet the aesthetics, technology and harsh environment application requirements

of large, multi-location enterprises, SMEs and SMB organisations.

Tape dispenser

Key features of this product are:

- Six different lengths can be programmed to cut
- Possible to cut two roll tapes at the same time due to dual photo sensor preset and loop counter
- Tape support to position a cut piece of tape
- Tape can be set without using bobbin
- Possible to cut non-adhesive tapes
- Build-in separator for cutting two rolls tape, guide plate and blade oil

Aluminium decorative cases

The aluminium decorative ADG cases made by Fischer Elektronik have a discreet and modern design.

The individually-milled front plate meets highest decorative demands by having a grounded surface. The inset guide grooves are used for insertion of PCBs. One of many application fields of this high-quality case is in the audio field, as an amplifier case.
