Power bank

Long-lasting charging

Syska Accessories has launched Syska Power Vault 200 power bank—a multi-functional power bank that comes in white and black colours, and is equipped with a large grade A+ 20,000mAh lithium-polymer battery. The product has a unique current shunting system that enables the connected devices charge in stages. The built-in intelligent circuit control can shunt the current when the power bank is self-charging and outputting power at the same time. This helps while charging more than one device at the same time, ensuring that all devices are charged uniformly and at a fast speed. The built-in overcharging and discharge protection system ensures that there is no drain or stress on Power Vault 200's batteries. This helps the power bank to efficiently use the power stored within it, and maximises its usage per charge.

An intelligent circuit system in Power Vault 200 protects it when charging, and also when charge is being discharged to other devices. The power bank gives up to 500 charge/discharge cycles. By modulation of pulse width, it can reduce energy consumption while recharging devices to prolong its own battery life.

Bluetooth speaker

With passive radiator design for powerful bass

F&D has added portable Bluetooth speaker W19 to its party series. The lightweight, portable speaker weighs 1.18 kilograms, which makes it easier to be carried around anywhere. Passive radiator design for springy bass provides high clarity and powerful sound in all audio ranges. With its inbuilt microphone, users can take calls while connected to the speaker without any interruption.

The 12-watt RMS speaker brings alive 360-degree surround sound experience that comes with depth and immersion. A 3000mAh internal lithium-ion battery enables long play time. The speaker comprises 4.2 Bluetooth connectivity and transmits stable signals in high speed.

Wireless charger

Smart companion for a wireless future

Digitek has released fast wireless charger model DPWC 10 W whose charging pad uses electromagnetic field to power up compatible devices. The 10-watt wireless charger delivers a safe and reliable wireless charging experience. Its inbuilt Qi technology requires the user to simply leave the phone on the charging pad. The accessory offers ultra-rapid charging and adds convenience by removing the complexity of charging cables.

The smart charging device's features like slim body structure, light weight and travel-friendly complement any environment. LED light in the device shows that the phone is correctly aligned on the base and is charging. The inbuilt smart IC chip detects optimum charging current for gadgets and provides the ideal power for the most robust and protected charging experience. Short-circuit protection and control heat technology make the device human-body friendly with zero radiation.
