

FEATURES TO LOOK FOR IN YOUR NEW SMART TV

A smart TV platform

too close to the TV, it can cause neck strain and eye fatigue.

For a small room, a 76.2cm to 101.6cm (30-inch to 40-inch) TV screen (size measured diagonally) is a good choice. But if you want it for your drawing hall or a bigger room, go beyond 101.6cm—up to the maximum available size, whichever suits your pocket and the size of the room.

Talking about screen resolution, do not buy a TV less than full-HD (1920p × 1080p). A full-HD screen is good for a good video experience; but if you want a big screen (above 101.6cm), go for ultra-HD (UHD) or 4K (3840p × 2160p) resolution.

Do not go for 8K TVs because broadcasting compatible with 8K resolution does not exist yet. So take your time, let the technology develop to its fullest; you may get low-cost options by then.

A flat screen provides a better experience when watching in a group, as compared to a curved one. For a curved screen you need to be at its focal point for best experience.

Wireless connectivity, a feature that must be smart

You cannot say that your TV is smart, unless it can wirelessly connect to the Internet and your mobile devices. You need a good Internet speed for most purposes, but if you plan on streaming games or 4K con-

Televisions with high-definition picture quality are what viewers expect at the least today. Having smart features added to them makes TV viewing experience even more enjoyable. All TV manufacturers have their own smart interface, each having significant

differences. These smart TV platforms enhance your viewing experience. This article takes you through the list of features you should look for while buying a new smart TV.

Screen matters the most

The screen is a major factor in deciding the cost of a smart TV. When you enter a consumer electronics store, a bigger screen might seem better, but you must decide smartly. The ideal distance of viewing a TV is at least five times the width of the screen. If you are sitting
