

Government's new schemes to turn India into an export hub for electronics

New schemes introduced by the government will focus not only on manufacturing electronics in India but also on positioning the country as an export hub, a top government official said at MAIT's Electronics Manufacturing Summit 2019.

According to a report in the *Economic Times*, Ajay Prakash Sawhney, electronics and IT secretary, said that there has been a widening and deepening of the electronics manufacturing ecosystem in the country. He added that apart from various brands coming to India to set up a

manufacturing base, their supply chain partners have also started participating in the production process.

The official said that many multinational companies are already using their India operations for the design and R&D of new products and services.

MAIT president Nitin Kunkolienker said that India's demand for consumer electronics has grown tremendously in the recent past, leading to an increase in imports. He added that reforms like Make in India will help the nation in becoming a hub for the global electronics market.

India to impose anti-dumping duty on solar EVA sheet imports

The Directorate General of Trade Remedies (DGTR), a unit of Ministry of Commerce and Industry, has recommended that anti-dumping duty be imposed on the import of solar ethylene vinyl acetate (EVA) sheets for solar modules. These EVA sheets come from China, Malaysia, Saudi Arabia and Thailand. The DGTR said that the duty was needed to counter the damage caused by imports from these countries. The duty will be extended for five years from the date of notification of the decision, which will be issued by the government.

However, South Korea has been exempted from the duty imposition as the DGTR found that its products mostly comprised EVA resins, a raw material for EVA sheets.

The petition was filed by four solar EVA sheet makers in India, including Renewsys, Vishakha Renewables and Allied Glasses. It stated that there is no known difference between EVA sheets imported from the above-mentioned countries and those produced by the petitioners, and the consumers can use the two interchangeably.

Following a complaint, the directo-

On The Move
