

Government's role

Along with parents and educational institutions, government policies can further boost market growth. Dr Dhekale suggests, "The government should increase grants on the educational sector. Currently, teaching staff in all colleges and universities are not sufficient. Posts of retired lecturers are not fulfilled by the government immediately, so the quality of education goes down in India."

Experts are of the opinion that training centres with minimum cost can be started. Inclusion of augmented reality (AR) and virtual reality (VR) training platforms can also assist in catering to present requirements. Dr Raut says, "The government will provide financial assistance to set up modern manufacturing machinery in the real sense for the MSME sector. This will ultimately help generate new employment. And on the basis of market needs and addition of a new product range, production has grown in the last few years."

Vira believes that measures such as making import procedures more affordable, keeping minimal paperwork, giving licence to traders for products like drones with a transparent after-sales policy and funding soft

- Sagar Gala, director, Gala Electronics
- V. Ravi, chief operating officer, Anshuman Tech Pvt Ltd

loans for startups can aid dealers.

Dr Raut is of the view that awareness can only be created through communication. He asserts, "The government will provide a common market platform (online) only for all educational institutes, as well as the government and private manufacturers."

He adds, "Presently, GST rate is eighteen per cent. As this product is for educational purpose, GST rate needs to be down to five or zero per cent."

Also, for existing policies to be effective, strengthening them is essential. V. Ravi says, "Central Vigilance Commission (CVC) and Right to Information (RTI) norms should be strengthened to encourage Made in India purchases. Modified Special Incentive Package Scheme (MSIPS) should recognise didactic training for manufacturers. Monetary incentive schemes should include dies/moulds for improving aesthetics for enhancing exports and Indian topline. Also, Market Development Assistance (MDA) should be broader and not just limited to a few government-supported institutions."

Market options

Supply chain of electronic products includes various manufacturers, suppliers and distributors. There is a huge competition in this field owing to both local and global industry players. Some of them are mentioned below.

Rajguru Electronics (I) Pvt Ltd is engaged in the distribution, import, export and trading of electronic components and modules for training kits.

Mega Kit is an electronics manufacturer that supplies electronics project kits with detailed theoretical circuit description, functional block

diagrams, complete component list, neatly-packed total components, etc.

Macfos Pvt Ltd (Robu.in) develops as well as distributes mechanical and electronic tools and services across the globe to colleges, research labs and hobbyists.

Perfect Electronics is a manufacturer of educational products such as electrical and electronics experimental boards for the departments of physics, electronics and computer science. Projects for electronics engineers and hobbyists are also developed at their facility.

Bormonz Technologies is a provider of R&D electronics modules, development boards along with educational project guidance.

Hi Technology is a provider of electronic projects (DIY) and components, development boards, kits, tools, education apparatus and sensors.

SINCOM Sindhu Electronics & Communication Pvt Ltd manufactures, supplies and exports electronics educational trainer kits and equipment.

Gala Electronics is a robotics kit solution company, distributor and supplier of electronic components such as passive electronic components, chip resistors and electrolytic capacitors.

Anshuman Tech Pvt Ltd is a manufacturer and exporter of laboratory training equipment and educational training equipment across India.

FPGA Solution is a manufacturer and supplier of design environments, low-cost development boards, training kits and project hobby kits.

Kits'n'Spares is a provider of several training products including DIY kits for beginners and engineers, development boards and equipment. **EFY**
