

required, but the price again depends on the scope of work.”

Desktop version of Terra Mapper, the data processing and photogrammetric software developed to speed up the drone services, has recently been launched in India. The user has to upload UAV data to let the software process it and generate results like volume estimation, digital terrain models and contour lines. It is available at an affordable price with dis-

counts for non-profit organisations and educational institutions.

With more than 25 branches globally, the company serves both government and private institutions in a number of sectors such as construction, electricity, energy, and oil and gas.

Talking about the company's future plans, Srivastava says, “We are actively looking to support the government's Smart Cities initiatives through intelligent data acquisition and analyt-

ics. For example, transport ministry under Nitin Gadkari has fixed a target to build 40km of roads per day. This kind of growth is not possible without using cutting-edge technologies in every sphere, right from planning and execution to maintenance. Terra Drone India's smart data analytics has the power to act as a key decision support system for stakeholders across industries.”

3 HOW TO GET YOUR STARTUP FUNDED

The Indian electronics system design and manufacturing (ESDM) and the Internet of Things (IoT) startup story has had many highs as well as lows. While the boom truly began in 2013, it was only over the next two years that investors poured money to back entrepreneurs, products and ideas.

Angel investors are the support pil-

lars on which a startup ecosystem is built. They are the ones who make the first bet on emerging startups, when others hesitate. While this is a risk for angel investors, their investments come as much-needed third-party validation for startups. Angels, thus, play a crucial role in fuelling a startup's journey and building the successful companies of the future.

Angel investors are also a preferred source of equity rather than VC, as they support a wider range of innovations in comparison to VCs. Angel investors do not shy away from investing in a broad range of sectors and geographies, and do not overlook local startups either.

Indian startups have always struggled to attract angel investments as com-
