

features include 24V/48V outputs (-2% ~ +17% VADJ range), high efficiency of 95 per cent, 150 per cent peak power for four seconds, packaged in a rugged metal enclosure that is EN61373-qualified for railway shock and vibration.

## Power supplies and loads

ITECH has launched new IT-M series power supplies and loads. The series not only innovates in the technical aspects but also provides complete, innovative solutions from the perspective of industrial applications. The full

range of products is with only 1/21U size, with a patented design and side ventilation design. The flexible modular design makes it simple for IT-M3100 to stack directly. The open structure brings users with different free combinations, just like blocks stacking, simple and convenient.

## MISCELLANEOUS

### Door controller

DOOR FMX is a high-performance door controller with multispectral sensor technology. It reads surface as well as subsurface of a finger, producing more accurate image even when the finger surface features are distorted or difficult to read due to dirt, usage, age or environment.

Powered by a high-speed processor, DOOR FMX is specifically engineered for high security applications including defence, airports, R&D labs, banks and industries such as education, mining, construction and

heavy manufacturing for their access control and time-attendance needs.

### Development toolset

A new plug-and-play powerline communication (PLC) development toolset

from STMicroelectronics accelerates the development of turn-key powerline networks by providing all hardware and software components needed to build and run a PLC application.

The new development toolset lets developers connect smart devices using ST8500/STLD1 chipset—proven in utility-class smart-meter projects—on ST's EVALKITST8500-1 evaluation kit for ST8500 PLC modem system-on-chip and STLD1 dual-line driver.

### Pogo pins

MSB Electronics has launched a new range of pogo pins, pogo connectors,

magnetic pogo connectors, dip pogo pins and SMD pogo pins, which are useful in smart devices, smart watches, smart locks and the Internet of Things (IoT) devices. These are also used in making waterproof devices.

### Single-board computer

UDOO NEO is an Arduino-powered Android/Linux single-board computer enriched with nine-axis motion sensors, Bluetooth 4.0 and a Wi-Fi module. It has two cores embedded on the same chip. UDOO NEO can be used as a low-power computer attached to a screen, mouse and keyboard. It can also be used as an ARM development board as well as an

ATMEL development board. An extensive open source documentation covers any aspect of the computer, and can be edited by users on GitHub.

### LED modules

Features of LED Line Smd Comfort-B 3R are:

- Optimised length for 1.500mm trunking systems (metric dimension)
- 500mm length per Optic + Board

- 3x Optic + Board for one 1.500mm luminaire
- Economic PCB and optic design
- Highly efficient: up to 189lm/W
- Different optics available for various applications
- Easy to assemble using VS fixing clip
- Up to 14.000lm for 1.500mm
- Small colour tolerance: three-step MacAdams
- Long lifetime: > 60.000h L80/B10

### Industrial IoT gateway

An Internet of Things (IoT) gateway called Proficloud gateway from Phoenix Contact enables companies to take a first step into the IoT. With Proficloud as a cloud solution, users get a safe and intuitively configurable start into the IoT world and can benefit from numerous advantages of cloud. Essential Proficloud characteristics are openness, user friendliness and access security.
