

Crisp

Visit: <https://crisp.chat>

Full version: Paid; free trial

Crisp is a cloud-based software that creates a multi-channel platform for the customer-business relationship. Customised live chat option is available for users to access help articles and resolve issues directly. Files, images and documents can be shared via chat. A single dashboard is maintained for all replies, no matter what messaging app is being used. The software also allows the company to send target emails and in-app messages. Other features include translation in real time, audio and video calling, and file sharing. Monitoring of downtime is done to alert the company as well as users.

Yammer

Updated: June 2019

OS: Android and iOS

Download: Full version (free)

Yammer is a social network used to connect and collaborate with individuals at different levels in an organisation. Access to the network is decided by the particular user's Internet domain so that only people with approved email addresses may join their respective networks. Users can share documents, photos and videos regardless of size, and search for information so that ideas and projects can be easily organised from anywhere. Interactive notifications are generated in case an important activity takes place, and action can be taken directly from the lock screen. The app also offers on-the-fly message translation with support for 25 languages.

G Cloud Backup

Updated: June 2019

OS: Android and iOS

Download: Full version (paid)

G Cloud Backup enables users to automatically back up every version of their contacts, photos, videos, documents and calendars to a secure cloud location. The user interface is simple, and sharing can be done easily. It allows organisation of memories in a timeline, and individuals can go back in time to view any file they want. The background backup feature automatically backs up everything new once the location is changed. Migration and restoration to a new device can be done with a simple tap. Other options include disabling automatic schedule, uploading over mobile data, etc.

DocuSign

Updated: June 2019

OS: Android and iOS

Download: Full version (paid)

DocuSign is an e-signature and digital transaction management platform that allows users to fill out and e-sign documents without any monthly limit. Security is assured as files are encrypted and signatures comply with eSign Act. Signing orders and workflows can be set for multiple people. The app supports various file types including pdf, Word, Excel and images (JPEG, PNG, TIFF). Documents can be shared or imported via Dropbox, Google Drive and the like. Offline access gives the convenience of signing without an Internet connection.

aWallet Cloud Password Manager

Updated: November 2018; **OS:** Android and iOS

Download: Full version (paid)

aWallet Cloud Password Manager enables users to securely store passwords, credit card information, e-banking credentials, Web accounts and other custom data. It synchronises encrypted data with the cloud via Dropbox or Google Drive. A built-in editor enables changing and creating new data categories with custom icons. The app also comes with the option to preconfigure auto lock feature for a specific amount of time. The file gets automatically destroyed after a predefined number of successful attempts. Pro features include password generation, fingerprint-based unlocking and CSV import. Unlocking with face and touch ID is possible on iOS devices.

Triplt

Updated: May 2019

OS: Android and iOS

Download: Full version (paid)

Triplt is a travel organising app that creates a single itinerary for every trip. As soon as the booking is done and emailed to them, route and map view of all the plans get created instantly, and can even be accessed offline. Travel plans can be easily synced to the calendar or shared with other people. Pro features like monitoring for flight refunds, real-time flight alerts, access to information about the safety of the neighbourhood being visited and country-specific travel logistics assist the user from planning to landing.
