

Dashcam

Making driving safer

Roav by Anker Innovations has introduced a smarter and safer way to drive, with its entry-level dashcam A0 in India, engineered with panoramic optics, built-in Wi-Fi and a dedicated app.

Roav A0 dashcam attaches to the windshield to track and record every drive in wide angle, thanks to its 170-degree wide-angle lens. Roav A0 when connected to Roav dashcam app (supports Android and Apple, using the smartphone's Wi-Fi) streams video from the dashcam to the smartphone to view and download. Also, the dashcam's setup can be managed from the app itself. Recording starts automatically when the camera is plugged into the car's cigarette lighter socket.

The camera supports rich and clear videos, with an advanced chipset, six-lens elements and wide dynamic range image balancing combined to record every drive in crisp 1080p HD resolution.

Built to withstand extreme heat and cold for reliable use in virtually any environment, the device is equipped with an f/1.4 aperture lens that enables clear night vision and wide-angle views. It simultaneously covers up to five lanes of traffic.

Wireless flight adaptor

Optimised for travel

RHA has released a wireless flight adaptor that allows users to connect wireless headphones to in-flight entertainment systems. The adaptor can also be used to turn audio devices—from cassette players to game consoles—into Bluetooth compatible devices.

The adaptor has two jacks, which can be used separately or together, allowing listeners to connect to either a single stereo channel or two mono audio channels. With a simple one-button interface, listeners can combine RHA's engineering with latest releases on in-flight entertainment.

The compact and sleek design, in addition to a sixteen-hour battery life, ensures users can settle down on a long-haul flight without hassle. If they want to listen for even longer, the adaptor provides continuous playback if plugged in via USB-C cable.

The wireless flight adaptor also plugs into the headphone jack on portable gaming devices and fitness equipment, making it perfect for gamers and gym-goers. Vintage hi-fi and TV enthusiasts can listen and watch wire-free without noise complaints. The adaptor operates with SBC and aptX, and is equipped with Bluetooth 5 for

unshakeable connectivity and excellent sound performance. Easy pairing, ability to remember up to eight devices, and a range of more than ten metres ensures a seamless transition for the adventurers and go-getters of the world.

Wireless charging pad

With automatic temperature control

It is time to say goodbye to tangled wires, as Pebble has announced its stylish Sense wireless charging pad. With Sense, users can charge the compatible phone without the need to plug it into a wall charger or USB port.

The 10W fast wireless charger supports all Android and iOS wireless charging devices, and all other Qi-enabled devices. The cutting-edge Qi inductive technology simplifies charging into just setting the phone down on the charging pad. With a 10W output, the charger delivers power quickly and smoothly to the smartphone without having to sacrifice any speed compared to a wired charger. The wireless charging pad even charges through phone cases up to 5mm thick.

Pebble Sense supports multiple protection for extra safety, including automatic temperature control and input over-voltage protection that ensure safety of the smartphone and other devices throughout the charging process.
