PRODUCT DEVELOPMENT:

1 SOLVING THE PROBLEMS OF INNOVATION THROUGH COLLABORATION

In an age of disruption, where time-to-market makes the difference between pioneers and laggards, innovation must happen on multiple fronts

Google Chromecast goes from idea to prototype in four weeks with Flex

Google's foray into the streaming media market required a partner with global design, engineering, manufacturing and marketing know-how, plus proven expertise inventing intelligent consumer products.

Google wanted to bring stream-

ing online media to an unprecedented mass market, so it turned to Flex to create a disruptive device for living rooms everywhere. Together, Google and Flex brought Chromecast to life, conquering design challenges along the way and launching the product quickly in an extremely

competitive environment.

Google partnered with Flex to:

- Take Chromecast from idea to concept to worldwide production
- Design a prototype of Chromecast in four weeks
- Solve design and engineering challenges such as size, price, wireless capabilities and temperature with Sketch-to-Scale solutions
- Speed time-to-market, beating competitors on both market entry and price

Google engaged with Flex, sharing only rudimentary concepts of its product, seeking a partner to design, engineer and manufacture the device
