

Search results can be filtered by connector type, charging speed and payment option.

On reaching the station, the car needs to be connected with the charging point. For charging at operators who do not support charging with the app, an radio frequency identification (RFID) charging key can be purchased for € 9.95 to provide full coverage. Depending on the station, a charging

session can be started with the RFID charging key or card besides the app. Some of these are fast chargers and so the cost incurred for charging is more than that compared to a normal station.

After removing the cable, the cost is added to the monthly bill. In other cases, pay-as-you-go option (Scan&Charge) is also available that offers EV charging without registration

via QR code on the charging station and a mobile website backing it up. This saves the user from the hassle of keeping tens of RFID cards and going through individual billing methods of different operators. 24/7 customer service enables the driver to resolve any issues or queries directly.

With PlugSurfing having been taken over by Finnish charging infrastructure operator Fortum Charge and Drive AS, further expansion of charging services worldwide is inevitable. Following this vision, they have recently partnered with Kia motors and EasyCharger.

Transportation is one of the major contributors to the problems of pollution and global warming. Governments all over the world are aiming to reduce transport emissions. By increasing e-mobility and improving the EV ride experience, solutions like PlugSurfing are paving the way to make a clean and efficient transport accessible to drivers across the world. **EFY**
