

to refund and compensate passengers in a timely manner when a disruption occurs. Passengers can be notified of a delay or cancellation and refunded in digital currency, which can be used to repurchase airline tickets, book hotels, and avail other airport and travel-related services.

In addition to this, passengers can use the currency at retail stores in and around the airport to avail attractive discounts offered by retail partners. This will help airline operators to optimise costs through reduction of administrative overheads with quicker payments and settlements.

Nitesh Jain, vice president and global head - travel, hospitality and public sector vertical, Consumer Business Unit, Wipro Ltd, says, "Solutions in the areas of AI, blockchain, cloud, cybersecurity and the IoT have helped leading travel and hospitality companies become truly digital, with improved end customer experience and enhanced operational efficiencies."

A blockchain solution for dentistry has been established by a partnership with the premier Indian dental portal and renowned awards called BITEIN. Dr Ajay Kakar, BITEIN's founder, is helping Jeremias Grenzebach, co-founder and core developer at Dentacoin, to cater to dental professionals worldwide by aggregating a comprehensive offering, consisting of a news portal, dental research e-journal, online shop and auctions, dental business directory and last, but certainly not the least, a full-stack dental software solution.

How the blockchain works (Credit: googleimages.com)

Its goal is to provide a platform for local dentists to display their works, and contribute to the improvement of current dental techniques, treatments, systems and applications. This helps increase supply chain efficiency, facilitate innovative payments, strengthen relations between all market participants and make preventive dental care affordable.

Business opportunities

Blockchain technology can transform today's inequitable music industry. Z-POP Dream is one such example to establish a global entertainment ecosystem to better discover hidden pop music talents using blockchain to accelerate a new star's rise to stardom and to create a global token economy for the global music market. This type of business model will focus on two

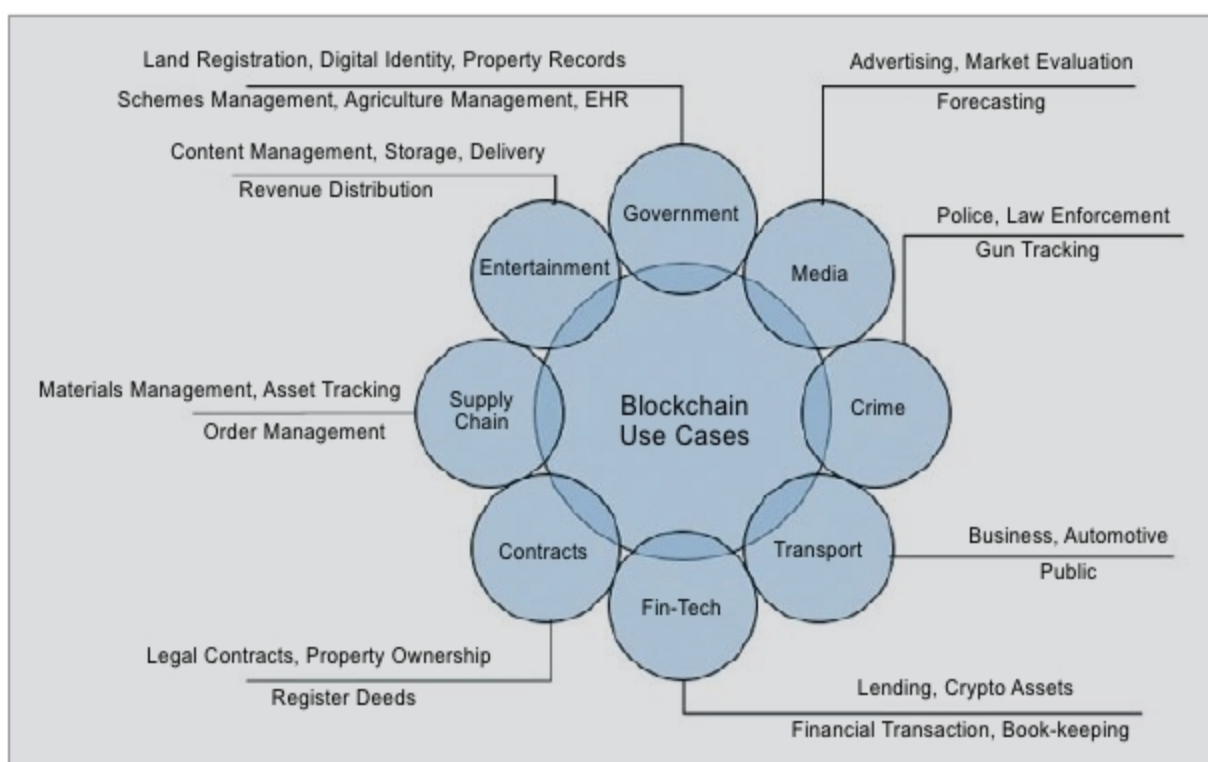

key components. One, proceeds from the initial token offering (ITO) will be used to create infrastructure for this star-creation business. Two, it will create a global online monetisation platform, which will tokenise revenue opportunities generated by the star-creation business, including concert tickets, merchandise, online content and admission to exclusive events. A combination of these two elements will help unite a broader audience and artists to create a bigger community.

Arijit Biswas, co-founder, EnrichAI, says, "In the technology space, we are hoping that the government will make investments in training and seminars on AI and the IoT for senior management of all leading industries in healthcare, energy, automobiles and agricultural sectors along with framing a Unified National Policy to boost blockchain innovation.

"We also expect financial incentives such as preferential tax rates and tax holidays to be provided to companies relocating from China. This would help businesses conduct themselves in a composed manner even after relocating.

"We expect the government to urge public sector undertakings to commit funds for indigenous startups to foster, nurture and incubate new ideas related to their respective sectors."

"Blockchain technology can be used to combat the issue of spam calls and fraud risks, to protect user information as well as the integrity of the telecom sector," adds Rajesh Dhuddu, global practice leader- blockchain, Tech Mahindra.
