

# A breath of fresh air in power electronics

## GO series

Cost-effective and accurate, miniature isolated current sensor GO speeds your drives applications.

A unique sensor with an integrated primary conductor achieves optimum temperature accuracy, measuring from -40 to +125 °C in a surface mounted S08 or S016 package.

[www.lem.com](http://www.lem.com)

- 10-30 A nominal current
- Better than 1.3 % accuracy @ +25°C
- Differential Hall principle measurement: very robust against external fields
- 2 µs response time
- Up to 3 kV RMS isolation
- Double Over-Current Detection outputs for short circuit and over-load protection (S016 version)
