

New-Generation Automotive Electronics, Infotronics And Skilled Workforce

Subhranshu Sekhar Samal
is head and co-ordinator (PMU), International Advanced Research Centre for Powder Metallurgy & New Materials (ARCI) and co-founder, Evergreen Association

Amrita Samal
is co-founder, Evergreen Association

S. Amitab
is currently working at Jindal Stainless Ltd in SMS and mechanical maintenance division

Progress in technological innovations for autonomous and intelligent transport systems with entertainment, connectivity and information about location is advancing at a great pace with the involvement of industry, academics and various startups

Various stakeholders are aiming to accomplish the technological requirements every now and then. Areas of advancement are safety, security, smart communication and an energy-efficient approach. Automotive industries are coming forward to develop and optimise various techniques and affordable adaptive products for integration in automobiles. Vehicle-to-vehicle and vehicle-to-infrastructure interfaces are playing a major role in these aspects for intelligent transport systems. Developments in navigation, traffic safety and decongestion issues are being addressed, and industries are trying hard to integrate with next-generation vehicles.

To address these issues, a strong and trained workforce is the need of the hour,

and the present government is taking various initiatives through Make in India, Digital India and Skill India missions. Academic and research institutes are also putting in efforts in India to address the gap areas in smart automotive systems through constant interventions via academic and research activities. The role of industry and academic partnerships is prominent and will make these possible in next few years. Emergence of the latest technologies as shown in Fig. 1 will support new automotive and auto infotronics dream into reality in the 21st century.

Automotive Mission Plan

The government of India's Automotive Mission Plan (AMP) 2006-2016 has come a long way in ensuring growth for the sector. The Indian automobile industry is expected to achieve a turnover of ~ US\$ 300 billion by the year 2026 and will grow at a rate of CAGR of approximately fifteen per cent from its current revenue of US\$ 74 billion. AMP 2016-2026 will help the automotive industry grow and benefit the Indian economy in the following ways:

- Contribution of auto industry in the country's GDP will rise to over twelve per cent.
- Around 65 million incremental number of direct and indirect jobs will be created.
- End of life policy will be implemented for old vehicles.
