EFY BUREAU

Granular

Visit: <https://granular.ag>
Full version: Paid

Granular is a cloud-based management tool that assists in making agriculture-related complex decisions to run farms more efficiently. Features include profitability tracking, crop health data, customised variable rate seeding prescriptions, fertility management recommendations, land valuation estimates, sales monitoring and more. Elimination of manual data entry helps save time. It easily syncs with the user's original accounting software and streamlines the accounts receivable/accounts payable process. As of now, the software supports more than 230 crop subspecies. Pricing depends on crop mix and farm size.

ARM

Visit: www.gdmdata.com
Full version: Paid

ARM by Gylling Data Management software is for scientists to manage and summarise agriculture-based research experiments. Besides data management tools, support for typical experimental designs and data protection is also available. By creating trials and analysing data to prepare reports, the software saves a lot of time. Other benefits include higher accuracy, automation of routine tasks and portability across different platforms. The tool is currently used in approximately hundred countries. The latest version includes options for creating custom labels, importing data from any weather source .csv file and a quick view toolbar.

AgroSense

Visit: <https://agrosense.eu>
Full version: Paid; free trial

AgroSense by Corizon is an open source management and precision agriculture software to increase harvest while ensuring reduction in costs. Options include mapping farm plots, daily activity analysis, product information sharing, support for different data formats like .csv, .dbf, shape and ISOxml for sensor (Cropcircle, Greenseeker, Fritzmeier, Yara N-sensor) data, etc. For this, features like creating treatment zones, importing data files and central field registration are available. Users can easily share work packages, parcel information and time-tables with their teams. Paid version offers live insights into field conditions and activities.

Cropio

Visit: <https://about.cropio.com>; **Full version:** Paid

Cropio is a globally-available Web-based tool for remote monitoring of agricultural land by using weather information and satellite data. Multiple farms can be easily managed from one place through real-time updates on field and crop conditions. Features include field history, vegetation map, flexible sensors' configurations, weather reports, harvest weighing, soil moisture and soil tests, live stream, among others. This makes optimum usage of water and fertiliser possible. The user gets immediate notifications if something goes wrong to ensure safety, even if offline. These options enable effective management of agricultural activities to increase productivity and get accurate forecasts about the harvest.
