

Google launches five news apps and games for reducing screen time

Google has launched five new apps that allow users to reduce the time they spend on their phone. The first app, Unlock Clock, brings a new live wallpaper that lets users keep track of how many times they may have unlocked their phone during the day.

Post Box app is designed to allow users choose when they want notifications to be delivered on their phone.

We Flip is more of a game than an app. Basically, the user gets together a group of friends and everyone opens We Flip app at the same time on their phones. The idea is to see who can stay away from their phone the longest.

Desert Island allows users to pick a bunch of essential apps on their phone, and then wants them to use only those apps. The idea is to choose apps that are genuinely important.

The last of the lot, Morph wants users to tell it which apps they usually use at what time of the day. The app tries to adapt the phone based on time of day to serve apps that they may require at that time.

Adobe unveils AI-powered photo editor Photoshop Camera for smartphones

To empower smartphone photography lovers, software major Adobe has launched an artificial intelligence (AI)-enabled camera app that brings Photoshop capabilities to the smartphone. With Photoshop Camera, users can capture, edit and share photos and

moments—both natural and creative—using real-time Photoshop-grade magic right from the viewfinder, leaving them free to focus on storytelling with powerful tools and effects.

Wearable device that can help with Internet addiction

A group of students at University of Indonesia has developed a wearable device that can help Internet users cut down on the time they spend looking at their phones. Studies have found that prolonged mobile phone usage has a specific lowering effect on heart rate variability (HRV) levels. The device, called Nettox (from Internet detox), is worn on the wrist and contains a pulse oximeter sensor that measures haemoglobin oxygen and HRV levels. Nettox device emits a sound when HRV and blood oxygen levels fall within this range, which reminds the wearers to stop using their phone.

Parablu introduces BluVault for Office 365

Parablu, an ISV partner of Microsoft, has introduced BluVault for Office 365, which extends endpoint data protection capabilities to protect Office365 data, that is, data in OneDrive for Business, Exchange Online and SharePoint Online. BluVault for Office 365 is designed to make a redundant copy of Office 365 data in Microsoft Azure cloud with options for blob tiering and automated data aging.
