

TAKING THE BIG SCREEN EXPERIENCE TO THE SMALL SCREEN

Nijhum Rudra

Massive advancements in technology for the past twenty to thirty years have changed our lives in various ways. In fact, it has eased the numerous facets of daily routine. Evolution of mobile technology and the Internet has benefitted us the most.

Gone are the days when mobile was limited to calling purposes. The mushrooming growth of smartphones blended with cheap high-speed Internet has captured the popularity of the TV entertainment industry. About ten years ago, the concept of mobile entertainment was limited only to such aspects as wallpapers, ringtones and small videos, which could be shared with close cohorts. According to mobile market researchers, by the end of 2019, mobile devices will transcend TV as the medium of attracting most minutes in various parts of the world.

Over-the-top (OTT) apps/online streaming platforms, online mobile games and mobile TVs have gained massive traction among the masses. Emergence of telecommunications company Jio and 4G Internet has completely

changed the traditional way of watching TV. Escalation of app downloads and games has also increased the average viewing times on phones, which ultimately signals that the mobile entertainment audience will increase, and heavy demand for such services will expand more in the future.

The mobile entertainment market

A new research from *TVGuide.com* has found that people are watching more TV now than ever. Forty two per cent viewers said they are watching more streaming content, while 89 per cent respondents have discovered new shows

on-demand or online after episodes or seasons have aired.

Further, thirty per cent respondents who pay for video said that they are watching more paid videos than they did previously. And, 68 per cent respondents are watching one to five hours of videos per week via apps on their mobile devices.

National Research Group (NRG) in a recent survey has stated that video accounts for more than half of total media consumption—and time spent is growing at a faster rate than any other media. NRG has found that eighteen year olds spend eleven hours on various media across devices
