

TRAVEL SMART WITH SMART TECH GADGETS

Potshangbam July

Travelling has become relatively inclusive to today's lifestyle. People travel in the quest for living in a moment without chaos in their mind. However, technology is a source of constant distraction while traveling, with calls, social media, messages, emails and the like.

To avoid this, they need to unplug from technology and distance themselves from the digital world. Nevertheless, benefits of travel electronics cannot be ignored completely from the convenience and safety points of view.

One should be aware which smart tools or gadgets matter over frivolous distractions in unknown destinations. There are many travel technologies that can change the whole travel experience by making the trips seamless. In fact, these gadgets play a significant role in upgrading and enhancing the experience.

When it comes to travel gadgets, most of us cannot think beyond smartphones and travel apps. Many of us are still not aware of devices that can come in handy and be beneficial in difficult circumstances. What makes these devices attractive is their small size, light weight and the ease with which these can be used anywhere. Their utility in worst conditions, especially outdoor activities, may surprise

you. These are extremely useful in solving unexpected problems effectively. Therefore it is vital to feature these innovative technologies in the must-have list while making travel plans. Here are a few travel gadgets that provide smart travel solutions.

Water-filtering bottle

Such water bottles are equipped with ultra-filtration technology to filter out viruses, bacteria, cysts and parasites, among others. These filter out the presence of chlorine and heavy metals, and

purify water to make it safe to consume. These eliminate bad smells and make the water drinkable even from questionable sources, such as ponds, lakes and streams.

Plus, the bottles improve the taste of the water. These are ideal to carry for outdoor adventures like hiking, backpacking and in harsh environmental conditions. LifeStraw Go bottle is a good option, which comes with an advanced two-stage water filter technology that can filter out 99.9 per cent of water-borne bacteria.

Personal humidifier

This is a small electronic item that you can comfortably carry in your travel bag. The device allows use of any disposable water bottle or portable tank as its reservoir. It screws

the water bottle into its tiny base that uses ultrasonic sound waves in generating water vapour. The device features an auto-off sensor that notifies when water content is low in the reservoir. It can be powered using a USB cable or batteries, and lasts many hours.

A personal humidifier is available in two types: manual and automatic. The automatic variant is much more effective and operates effortlessly in comparison with the manual one. A humidifier is specially recommended
