

for high-altitude destinations having lower oxygen levels. It is also helpful for those with respiratory issues, in areas where there are no proper windows or air-conditioning units.

RFID-blocking wallet or purse

One of the best ways to safeguard personal data or identity theft is using an RFID blocking wallet. RFID blocking wallet protects your information in credit cards, IDs, driving licence and passport. Some cards also come

with an embedded RFID chip that transmit electromagnetic fields wirelessly, and payment can be made by placing the card near the scanner instead of swiping it. However, there is a risk attached with this chip if not protected by RFID.

Electronic pickpocketing, or e-pickpocketing, allows easily access to sensitive data on such cards, by scanning the wallet in the back pocket. Hackers can create a duplicate of the credit/debit card. RFID-blocking wallets block signals from transmitting and prevent e-pickpocketing.

Tracking device

Travel tracking devices are available in practical and compact designs. These are lightweight and can be discreetly attached to the luggage, wallet, phone, keys, handbag, etc. These devices keep a watchful eye on valuable possessions while travelling. Besides, you can ring the devices to trace the location of your belongings.

Tile is a popular Bluetooth tracking device that has a range of 45 metres. It is battery-operated, and the batteries are replaceable. The

connected application is provided for tracking for both Google and Apple devices.

Pocket-size washing machine

A portable washing machine is super-light and compact to carry. It is electricity-free, and you can easily slip it into a backpack unlike a traditional washing machine. It is useful in locations where there is scarcity of water.

Scrubba wash bag is equipped with a flexible washboard and small nodules that help in scrubbing the clothes with limited water. This washing bag has a transparent window to view washing and water-filling levels. The bag weighs 142 grams, and uses two to three litres of water and two to three drops of cleaning liquid per wash, to wash several dirty items.

Mini steam iron

A travel steam iron is smaller than an iPad. It can easily be stashed in a

bag or suitcase, and is convenient for a road trip. It does not take time to heat up—takes about a minute—and it can be used for about ten minutes continuously per water fill. It features

a detachable and translucent water tank that shows the level of water inside. Besides, the device is equipped with an automatic shut-off feature to control overheating, or if it runs out of water. The steamer is safe to use on various types of clothes.

Automatic vacuum pump/compressor

This gadget can sort out space problem by compressing clothes and other stuff automatically. The process creates extra space so you can fit in more items inside the bag. As per research, air occupies most space inside a bag,

and a vacuum compressor can release air out so that you may carry a bag that is much smaller and lighter.

A device like Vago is a travel-friendly automatic vacuum pump, equipped with a pressure-detecting sensor that removes all air inside the suitcase. It easily condenses the clothes to half their size, thus increasing space. **EFY**
