

Automotive industry to become largest market for 5G IoT in 2023

The automotive industry will become the largest market opportunity for 5G IoT (Internet of Things) solutions in 2023. It will represent 53 per cent of the overall 5G IoT endpoint opportunity in that year, a report from Gartner states.

According to the report, within the automotive sector, embedded connected-car modules are the major use-cases for 5G. Embedded endpoints in connected cars for commercial and consumer markets will represent an

installed base of 19.1 million units out of a total of 25.9 million 5G endpoints in the automotive sector in 2023.

It also projected that the share of cars actively connected to a 5G service will grow from 15 per cent in 2020 to 74 per cent in 2023. This figure will reach 94 per cent in 2028 when 5G technology will be used for cellular V2X communications that allow messages to be sent and received within vehicles and between vehicles, infrastructure, pedestrians and cyclists.

Four electronics manufacturing clusters to come up in Tamil Nadu by 2023

The Tamil Nadu government is planning to develop greenfield electronics manufacturing clusters across the state, in Chennai, Tiruvallur, Hosur and Kancheepuram by 2023. It is also likely to develop brownfield clusters in Sriperumbudur and Oragadam.

The state government will also come up with an electronics industries association of India's industrial park in Coimbatore. A report by the

New Indian Express informs that the state government will seek Central government's assistance to attract investments to these clusters in the electronics system design and manufacturing (ESDM) sector.

Under National Policy on Electronics, the Centre will provide subsidies at the rate of 50 per cent and 75 per cent of the project cost for greenfield and brownfield clusters, respectively, with a ceiling of ₹ 500 million.

Flex considers US\$ 500 million investment in India

One of the world's largest exporter of electronics goods, Flex is planning to ramp up investments in India to expand its manufacturing capabilities and increase its exports from the South Asian nation to around twelve billion dollars.

Richard Hopkins, president, Flex, informed communications and IT minister Ravi Shankar Prasad that the US\$ 26 billion company was

considering India as one of the top geographies to increase its investments. He discussed a significant export roadmap of electronic components from the country for which Flex would need specific support from New Delhi.

The proposed investment by Flex coincides with India's efforts to attract global manufacturers. But experts say that India needs to move quickly on

ON THE move
