

Comprehensive Health Measurement MCUs

Individual and household health measurement solutions

Holtek provides a full range of health measurement IC application solutions for individual and household health measurement products. These are implemented using a series of highly functionally integrated and excellent cost/performance ratio ASSP MCUs. These MCUs contain a high resolution A/D converter, a programmable reference voltage source, operational amplifiers, temperature sensor, AFE circuit, voltage regulator, multiple interfaces and IAP data storage as well as a range of other features. With these functions the MCUs can accurately measure a full array of personal health parameters thus providing individuals and households with a convenient and easy means of health monitoring.

Blood Pressure Monitors

Used in Arm/Wrist Blood Pressure Monitors and other home health care applications.

Glucose Meters

Used in Glucose Meters or in meters with integrated blood glucose, uric acid and cholesterol all-in-one measurements.

Ear Thermometers

Include functions such as a 24-bit A/D converter and temperature sensor, which can be used in Infrared Thermometers, Ear Thermometers, high-resolution Electronic Scale products and other high-accuracy measurement products etc.

Body Fat Scales

Used in Body Fat Scales, Weight Scales and other health care measurement equipment.

Weight meter

Used in Weight meter, Electronic scale and other pressure measurement products etc.

Treadmill

Used in Treadmill, this can be used for body fat and heart rate measurement during exercise.
