YOUR SUGGESTIONS

SENSORS FOR CONSUMERS

The 'Sensors for Consumer Electronics' article published in September issue was an excellent writeup of all kinds of applications. If smart lock and kitchen sensors, as mentioned in the article, are made in our country, I think these will have a good market.

K. Padmanabhan

Through email

EFY. Thanks for the feedback! We are glad to know that you liked the article. Regarding smart locks and smart kitchen sensors, there are a few Indian companies already making these products. A number of these are listed on our Electronics Industry Directory, and our website, www.eleb2b.com

YOUR SUGGESTIONS

Please publish some articles on the following topics:

1. Basics of electronics (including different types of components, such as resistors, capacitors, inductors, transformers, transistors, diodes, triacs, SCRs and MOSFETs), advantages and disadvantages, cost-effectiveness, compositions, packages and so on for young and budding engineers.

2. Industrial measurement instruments or surveys on process control instruments, including temperature controllers, timers, counters, humidity controllers and the like.

3. World Trade Organization (WTO) and Indian electronic components manufacturers before and after 1995.

Also, EFY events and exhibitions should be expanded to other cities, including Hyderabad, Pune, Chennai and Ahmedabad.

Electronics Projects

I want to build 'DC Motor Starter Using Arduino Uno Board' DIY project available on your website, <https://electronicsforu.com>. And I would like to add more functions to it. I need a potentiometer to preselect the maximum PWM value and be able to increase it gradually till the maximum value is achieved.

Nicos

The author Samiuddhin replies:

Thank you for taking an interest in my article! Assume that the potentiometer wiper (middle pin) is connected to analogue input pin A0 of Arduino with one end of the potentiometer to 5V and another end to ground. Replace PWM values with a variable to store analogue input A0's value. Change maximum and minimum values on 'for' loop on both 'on()' and 'off()' functions. Simply follow the below steps:

1. Replace 'int soft[] = {0,25,50,75,100,125,150,175,200,225};' with a variable as unsigned int to store the value of A0. (Here, the variable is maxPWM.)

2. In 'void' loop function, add the two lines given below.
`maxPWM = analogRead(A0);
maxPWM /= 4;`

3. Change 'for' loop as indicated below on both on() and off() functions.
`for (n=0; n<maxPWMvalue; n++) in on() function, and
for (m=maxPWMvalue; m>0; m--) in off() function,`

Can you provide a demo video for 'Light Animations Using Arduino

and MATLAB' circuit available on your website, <https://electronicsforu.com>?

N. Manikanta Sai

EFY. Please write to us on support@efy.in for the video or any other help.

The 'Motion Detector Using NE555 Timer' DIY project available on your website, <https://electronicsforu.com>, is not working. When power is switched on, relay is energised without PIR sensor input. Even when the sensor is removed, relay is in energised state. Please help.

Sooraj

EFY. The relay should not get energised without PIR sensor input. First, check proper connections in the circuit, including correct polarities and orientations of various active components. If connections are okay, make sure that voltage at pin 2 of NE555 is high when sensor is not connected and low when sensor is connected, and motion is detected.

This is regarding 'Hybrid Solar Charger' DIY circuit available on your website, <https://electronicsforu.com>. Which simulation software can I use here?

Sanchit

EFY. There are many electronic circuit simulation software available in the market. One example is LTspice software, which is a freeware for electronic circuit simulation. It is the most widely distributed and used SPICE program in the industry. Other examples include OrCAD PSpice Designer and Proteus Design Suite. Both are proprietary software tools for electronic design automation.

suggestion regarding more events in other cities has been duly noted. Once our Bengaluru event achieves the goal set in our strategy plan, we will expand the scope further.

AUDIO COMPRESSION

This is regarding 'Audio Compression Using Wavelet with MATLAB' DIY project published in March 2018 issue. My laptop is unable to take the audio file, and Select Audio icon is missing in Haar

wavelet program output.

The author Lalit Patil replies:

The project has been fully tested and works fine. In your case, one of the reasons could be either you have low RAM in your laptop or MATLAB is consuming higher resources of the CPU. You can try using a laptop having a better configuration.
