

can store maximum, minimum and average values of temperature and wind speed. It can be used in dark atmosphere because it has a backlight display.

Digital multimeter

Key features of Keithley's new DMM6500 6½-digit touchscreen bench/system digital multimeter are:

- 10pA and 1Ω sensitivities, capacitance and temperature measurement
- 16-bit digitiser for waveform and transient capture at up to 1Msamples/s
- Graphical touchscreen interface with pinch-and-zoom control, cursors, and statistics for detailed analysis and quantification of waveform data
- Free KickStart instrument control software for automated data acquisition and testing

Digital clampmeter

MECO-G introduces new and improvised digital clampmeter model R-2070C. The instrument features 6000 counts, true-RMS AC current measurement with backlight LCD display. It can measure AC/DC voltage, resistance, capacitance, temperature and frequency. Special functions like hFE test, diode test, duty

cycle and audible continuity test are also available. NCV, data hold and automatic power off are additional features.

Aerospace toolbox

MathWorks has introduced new flight analysis and visualisation capabilities for aerospace design with MATLAB and Simulink. In release 2018b, Aerospace Blockset adds flight control analysis tools to help analyse flying qualities of aerospace vehicles.

Aerospace Toolbox adds the ability to customise user interfaces featuring cockpit flight instruments to visualise and analyse the motion and behaviour of aerospace vehicles. Engineers can now develop continuous workflows from the early stages of vehicle design and development to flight prototyping, reducing time between design and testing.

Data-management solution

Arm has launched its easy-to-deploy retail solution that enables retailers to securely consolidate, unify and manage previously-siloed digital customer data and physical in-store Internet of Things (IoT) data to provide more personalised offers, build brand loyalty and drive better operations. The solution combines Arm Pelion IoT and Arm Treasure Data customer data platforms to help retailers break down data silos and obtain a holistic view of their shopper's path to purchase.

Biosensor module

Designers now have an easier way to deliver both photoplethysmogram (PPG) and electrocardiogram (ECG) measurements for health monitoring from a mobile, battery-powered device. The new MAX86150 from Maxim Integrated Products is a first-

of-a-kind biosensor module, comprised of internal LEDs, photodetectors and an ECG analogue front-end (AFE) to provide highly-accurate, FDA-certifiable PPG and ECG performance in compact, power-saving designs, including cellphones, laptops, tablets and smart speakers.

Access control solution

Matrix access control management is a comprehensive and flexible solution designed to meet access control needs of medium and large enterprises. This access control software allows controlling access on three dimensions simultaneously, namely, user, zone and time, by answering three fundamental questions about who, where and when.

In addition, it ensures security of employees and assets with the help of value-added features like anti-pass back, two-person rule, first-in user, blocked users, door auto re-lock, guard tour, man-trap and smart-card-based identification.

Wave soldering machine

To cater to the versatile needs of the industry and various complex PCB types, EMS Technologies is launching Stallion 400fc—a finger conveyor-type wave soldering machine. This machine is being introduced to cater to high production needs and bigger PCB sizes used in defence, aerospace, televisions, set-top boxes and other complex applications requiring multi-layered boards. The unique enhanced PCB width along with top and bottom pre-heating systems is ready to fulfil demanding needs while maintaining high output with reliable soldering quality.
