

MISCELLANEOUS TOOLS

Useful For Businesses

GoEasyPOS software

Visit: <https://goeasypos.com>

Full version: Paid

GoEasyPOS is a cloud-based software for local businesses to improve sales and inventory visibility. Various businesses, including restaurants, retail stores, e-commerce and optical businesses, can utilise GoEasyPOS to optimise operations through supply chain, inventory and process management. It is also suitable for businesses with multiple outlets. GoEasyPOS provides a dashboard-based view of real-time inventory updates and activity information. Analytics provide users with granular details to improve business strategies. Other features include supply chain analytics, stock management, e-commerce enablement, quick checkout and so on. Performance reporting on daily, weekly and monthly basis helps improve team management and workload distribution. The software also brings Mobile Point of Sale (POS) application, which optimises POS transactions through mobile devices.

VT Final Accounts

Visit: www.vtsoftware.co.uk

Full version: Paid

VT Final Accounts is a book-keeping and accounting plug-in software for Microsoft Excel. It introduces a range of book-keeping tools and templates that can be used by small-scale businesses to organise their accounting operations. The range of features includes transaction tracking, corporate tax calculation, cash flow tracking, ledger details, revenue management, double-entry-style report display and more. It features a linked workbook, which helps automatically populate the workbook based on data available in a given file. Its toolbar packs an array of quick-access buttons for easy usability. The software also allows printing of complete Excel workbooks with properly numbered worksheets. It can run on any 32-bit or 64-bit Windows computer with Excel 2002 or above. Users have to purchase an annual licence to use it, following a 60-days free trial.

Queris CMMS

Visit: <https://queris.pl>

Full version: Paid

Queris Computerized Maintenance Management System (CMMS) software can be used by industries of any scale to optimise manufacturing operations and warehouse management. Managers can use the cloud-based software-as-a-service (SaaS) platform to streamline tasks and stay updated about available manufacturing resources and machinery health. Through real-time monitoring and preventive maintenance, the system enables plants to curtail risks of failure and reduce downtime. Essential features include registration of plant structure, machines and parts of the system, detailed planning and scheduling of operational assignments and inspections, personnel and workflow management, documents circulation and more. The platform reports any system failure or downtime through email and SMS notifications. Users can generate reports and analyses of various parameters to take informed decisions towards systematic improvements.

Magic Projects

Visit: <http://xmarot.com>

Full version: Free

Magic Projects is a comprehensive project and task management software that enables managers to plan tasks, budgets and resource distribution, and perform project followups. It

can be useful for enterprises that follow Scrum project models. One of the essential features of the software is its task flow management. When a task is initially created, the project manager can set up a complete task flow from design to implementation and testing. Everyone involved in the task can add comments and share files to record their progress. Once a team member has completed his or her respective part, tasks are automatically assigned to the next member listed in the flowchart. This encourages autonomous and collaborative team work. Another benefit of the tool is its centralised information storage mode, which is accessible by anyone in the team, at any time.
