

Odoo

Visit: www.odoo.com

Full version: Free

Odoo is a versatile business software for a variety of applications such as customer-relationship management (CRM), websites/e-commerce, billing, accounting, warehouse tracking, project management, inventory tracking and more. It has three main categories of functions, namely, CRM functions, business management functions and enterprise resource planning (ERP) functions. Community version is open source, while enterprise version complements the community version with commercial features and services. The main advantage of Odoo is its scalable architecture. A large number of freelancers and organisations develop Odoo applications or modules, and put these on the market for sale, or for free download. The main Odoo component is OpenObjects framework, with approximately 300 million modules (also known as official modules) and over 5000 community modules. The software can be customised as a SaaS tool, desktop or mobile application.

IoT Toolbox

Updated: Nov 2018

Platforms: Android and iOS

Download: Full version (free)

IoT Toolbox by NXP Semiconductors can be used by engineers using NXP's IoT or connectivity chips over Bluetooth Low Energy (BLE), ZigBee or Thread, for demonstrating the IoT capabilities of systems. As of now, the app can be used for healthcare applications like blood pressure monitoring, cycling speed and cadence measurement, blood glucose monitoring, health thermometer, heart rate monitoring and proximity. It can be customised for use cases like over-the-air programming, tracker beacon, wireless console and more.

iOS

through the system. Data backup options are available, too. Widget templates are interactive with customisable appearance. Multiple dashboards can be generated with the app.

CamScanner

Updated: Dec 2018

Platforms: Android and iOS

Download: Full version (free)

CamScanner is an effective document scanning and editing tool that can store, sync and collaborate on a variety of content on smartphones, tablets and computers. It helps users digitise documents using a smartphone camera. It supports intelligent cropping and auto-enhancement to ensure clear text and graphics in scanned documents. In the advanced package (paid), it extracts text from images using optical character recognition (OCR) technology, and is able to search, edit or share text. It can also make notes and watermarks. Users can share scanned files as JPEGs or PDFs.

Android

iOS

functions in apps based on specific conditions. A large number of applications and software are compatible with IFTTT, allowing users to customise their operations based on various use cases. For instance, they can get automated notifications on Twitter whenever there is a tweet with a particular hashtag, set auto-backup rules for documents to the cloud, set custom forecasts for weather and many more. Popular apps like Skype, Twitter, Gmail, Alexa, Salesforce, MailChimp and Reddit are compatible with IFTTT. Use cases can be customised as per Android and iOS devices.
