Dining out app for the elderly and the disabled, created by students

Most restaurants present many challenges for the elderly and the physically challenged, including too many stairs to climb, dim lighting and boisterous crowd. Comfort Zone app—developed by Class 12 science students of The Mother's International School, New Delhi—is a technological solution that is easy to use, and helps senior citizens and the physically challenged dine independently. The app sorts restaurants in increasing order of distance from current location. Appropriate filters are available in the navigation drawer, for instance, availability of car drop off at entrance, wheelchair accessibility, toilets and more.

App for healthcare professionals to determine appropriate dosage of antihemophilic factor/drug

Currently, healthcare professionals manually calculate dosage and its frequency for treating hemophilia, using variables like severity level, bleeding spot, patient's body weight and treatment type (prophylactic or on-demand). Missing any parameter could lead to sub-optimal treatment. DosEdge app safeguards dosage accuracy and reduces incidence of error, thereby helping physicians develop personalised dosing regimes tailored to the specific needs of respective patients. The app is free, does not require an active Internet connection, has a simple user interface

and needs minimal data inputs. However, it uses data analysis to make accurate and critical dosage calculations for factor replacement.

Vowelor, India's first platform for book lovers

Vowelor Books and Media has launched Vowelor app, which is India's first platform for book lovers. The platform is the result of keen observation of issues faced by readers and writers in the current literature landscape, especially in India. With the concept of Why Read Alone, Vowelor aims to give readers and writers an inclusive platform that not only lets them connect with like-minded book lovers but also solves problems such as finding good books to read and discussing books they are currently reading in real time.

aiCube, an intelligent engine for mobile advertising and analytics

RevX has announced an intelligent mobile advertising engine called aiCube, which brings app store data intelligence to mobile programmatic buying. aiCube technology automatically validates every app publisher across more than 20 programmatic exchanges with data from Google and Apple stores for quality issues such as malware, adware, misleading app data and brand-unsafe content. Further, aiCube fills missing data such as app category and publisher names in bid requests for precise targeting and optimisation. It also adds a layer of audience intelligence and artificial intelligence (AI) for cohort analytics, lookalike modelling and budget allocation for performance optimisation.

The prices, features and specifications are based on information provided to us, or as available on various websites and portals. EFY cannot vouch for their accuracy.

"Let's talk. I not only speak human language but also machine language."

"I agree that technology is needed, but kindly do not provide free Wi-Fi in my temple. People will worship their phone instead of me."
