

Best smart protection network Unceasing Personal Safety

HOLTEK has combined both IoT and security technology to provide a range of stable and reliable security and fire protection products. These can be widely used in fire alarms, fire door monitors, human body detection and control, theft prevention, poisonous gas detection and other firefighting subsystems in smart home environments and commercial buildings. These products combine to provide overall smart security protection using far distance communication technology.

Low operating current, high accuracy HIRC, fire protection dual line communication circuit

Fire door monitor module, acousto-optic alarm, manual alarm button

Integrated dedicated CO/GAS AFE, fault detection circuit, UART/SPI/I²C communication interface

Integrated dedicated acousto-optic detection analog front end, IR transmitting circuit, fire protection dual line communication circuit

Integrated dedicated PIR/Microwave AFE, UART/SPI/I²C communication interface
