

STRATEGIC ELECTRONICS:

Offering Quantum Jump in Opportunities

Electronics is at the heart of all modern warfare systems and, presently, the country is at the cusp of transforming the import bill in electronics that is fast competing to surpass the oil bill, presenting an opportunity for Indian companies

India with the second largest armed forces in the world is identified as the seventh largest aerospace and defence (A&D) market globally with a sizeable budget spreading across the requirements of the country's army, navy and air force. Large-scale modernisation of defence forces and indigenisation of manufacturing have emerged as focus areas.

Emerging technologies will reshape modern-day warfare by harnessing the power of electronics. This, in turn, will make the Indian strategic electronics sector, mainly comprising A&D, a vibrant industry in India over the next decade. This is an opportune time to embark upon a new phase of self-reliance in the sector by manufacturing technologically-advanced equipment within India.

Opportunities galore

The defence sector in the country has been growing at a modest pace for the past few years. The segment has received a push under Make in India programme. The concept of import substitution is being gradually accepted by stakeholders.

Considering the Indian government is looking to achieve a turnover of ₹ 1.7 trillion and export of ₹ 350 billion in military goods and services by 2025, the strategic partnership (SP) model in defence production will boost Make in India programme to a great extent. Moreover, high acquisition plans of the three armed forces will help the industry acquire capital assets worth ₹ 15 trillion in the next ten years.

Defence production in India is gradually
