

Maxim Integrated Products introduces MAX98390 smart amplifier with integrated dynamic speaker management (DSM) algorithm to efficiently deliver louder, clearer, richer sound at the lowest quiescent power in the market. The boosted, digital class D DSM smart amplifier unleashes a system's full audio potential by safely driving higher power levels (up to 5.1W) into tiny speakers typically rated for much lower power between 1W to 3W.

Mobile intercom system

Thodukonics has launched ISM band 900MHz/2.4GHz fully digital wireless and mobile intercom system for up to a thousand users. It is similar to an ordinary cellphone handset and wireless land phone, but does not require any SIM

card, subscription or rental. It also does not require any mobile tower, central exchange, PBX box or central box. It works as a private mobile or wireless land phone network. The system uses encrypted adaptive random frequency hopping technology and, hence, has super anti-jamming capability.

National anthem player

This product consists of 200W audio amplifier, time switch and pen drive with inbuilt Indian national anthem. If 230V AC is applied to the system and if one or two times are programmed in a day, national anthem player will start playing at those times. Initially, audio tone of large sound is produced for ten seconds and then the announcement of playing the anthem is made, after which it is played for 1.5 minutes. After two minutes, power of the amplifier is automatically switched off.

MISCELLANEOUS

GNSS module

STMicroelectronics has enlarged its GNSS product offering with Teseo-LIV3R ROM-based module. The module provides ST's full GNSS algorithm capability for cost-conscious tracking and navigation devices. It also provides odometer functionality with three trip counters and reached-distance alert, along with geofencing capabilities with up to eight configurable circles and crossing-circles alarm. Support for real-time assisted GNSS with free server access ensures uninterrupted positioning data for dependable navigation.

Mobile-based employee portal

Matrix COSEC APTA is a comprehensive mobile-based employee portal that allows COSEC users to monitor and manage their time-attendance and leaves. Employees and managers can access their time-attendance information easily and perform related tasks remotely, which reduces a significant amount of time they usually spend on these issues. The portal can also be utilised in controlling unauthorised access into restricted and risk prone areas within organisational premises.

Software suite

Keysight Technologies' PathWave Design 2020 software suite includes new releases of flagship products: PathWave Advanced Design System (ADS) 2020, PathWave RFIC Design (GoldenGate) 2020, PathWave System Design (SystemVue) 2020 and PathWave RF Synthesis (Genesys) 2020. Technologies are pushing new limits in electronic design with longer battery life, smaller components and higher levels of integration. As a result, design requirements are

growing in complexity, as the amount of data continues to increase. Analysing and correlating that data requires multiple, non-integrated design tools that create unnecessary complexities.

Solution for mmWave 5G

Analog Devices has introduced a solution for millimetre-wave (mmWave) 5G with the highest available level of integration to reduce design requirements and complexity in the next generation of cellular network infrastructure. The solution combines the company's advanced beamformer IC, up/down frequency conversion (UDC) and additional mixed signal circuitry. This optimised beams-to-bits signal chain represents a unique set of capabilities.

Biometric device

Mantra Softech has introduced a portable biometric device MOXA7 for trusted enrollment, identification and authentication of individuals. The device is equipped with a reliable fingerprint scanner and 5MP auto-focus camera for clear face capture and to scan barcodes and QR codes. MOXA7 includes a high-volume 10,000mAh lithium-ion rechargeable battery that provides plenty of juice for field applications to run throughout the day.

Monitoring system

Indino 4.0 series defines a new way of transforming factories into smart/intelligent ones for efficient and easy remote monitoring of operational status of facilities such as on/off status, pressure and temperature. It supports a wide range of industrial protocols like Modbus, MQTT, JSON, RESTful, TCP/UDP and SNMP, which makes the process easy for IT engineers through open source APIs.
