

Traccar

Visit: www.traccar.org

Full version: Free

Traccar Server is a free and open source GPS tracking system that includes device communication back-end and Web interface. The server can be self-hosted in the cloud or on-premise. It provides various mapping options, including road maps and satellite imagery. Location history, trip, chart and summary reports can be downloaded or exported. Instant Web alerts along with support for email and SMS are sent in cases of harsh driving behaviour, geofencing and so on. It supports more than 170 GPS protocols and more than 1500 models of GPS tracking devices from a variety of vendors.

GPS Status and Toolbox

Updated: November 2018

OS: Android and iOS

Download: Full version (paid)

GPS Status and Toolbox is a tool to show all GPS and sensor data of a phone. It supports basic navigation functions and can be used as a simple compass. It can be used to measure the phone's speed, acceleration, brightness or air pressure provided the phone has the necessary sensors. Paid version includes the option to show, store, edit and export unlimited waypoints for navigation and features such as pressure, rotation, temperature and humidity values on the status screen if supported by the device.

Metal Detector

Updated: April 2019

OS: Android

Download: Full version (free)

Metal Detector requires an embedded magnetic sensor (magnetometer) to work accurately. Open the app and move it around to get the value of the magnetic field. When ferrous metals like steel and iron are nearby, the magnetic field level increases. The app can be used to find electrical wires in walls and iron pipes in the ground. The paid version includes features such as car

Android

locator and compass. Keep in mind that electronic equipment (such as TV, microwave, PC, etc) will also affect the magnetometer due to electromagnetic waves.

Radarbot

Updated: May 2019

OS: Android and iOS

Download: Full version (paid)

Radarbot is a tool to help users drive safely with a user-friendly interface. It combines real-time traffic alerts with a speed camera detection system using GPS and an advanced speedometer. On integration with any GPS navigator, it can simultaneously provide navigation alerts. It issues warnings when speed limit is exceeded. It also has battery saving mode and vibrating mode for motorists. Voice recognition feature allows users to raise alerts for other users without using a keypad. Other features include route save function and real-time visualisation of speed diagram, current, maximum and average speed.

Yonomi

Updated: April 2019

OS: Android and iOS

Download: Full version (free)

Yonomi for smart home automation allows users to connect the most popular smart home devices such

Android

as Amazon Echo, Google Home, Nest and Philips Hue using a single app. This saves time in monitoring different devices and allows them to control these devices from anywhere in the world. Users can create automated routines according to the time of the day, GPS location or even actions of other smart devices. In-app recommendations for routines are available based on the existing integrated devices. Routines can also be triggered manually.

iOS

Silent Phone

Updated: May 2019

OS: Android and iOS

Download: Full version (free)

Silent Phone keeps the personal and business information of its users safe and secure with simple zero-touch deployment for cross-platform security. It provides peer-to-peer encrypted calling, secure video, messaging and file transfers. Burn functionality protects text messaging with auto self-destruct after a set period of time. Voice memos ensure protection, unlike usual voicemails. Files of various formats such as pdf, doc, mp4, etc can be shared. Remote or in-house training is also available. The latest version has a better speakerphone toggle behaviour, and proximity sensor is disabled on the incoming call screen.
