

EQ-Radio device created by MIT (Credit: <http://news.mit.edu>)

monitoring and analysis of behaviour patterns, measuring actions, and noting facial expressions, voice intonation and body language. Smart devices will be able to assess the meaning behind certain emotions and respond accordingly.

Emotion-sensing technology can be applied in such areas as educational and diagnostic software, driverless cars, personal robots, pervasive computing, sentient virtual reality, video games, affective toys and consumer electronics devices. This article discusses the state of progress of the electronics-based emotion-sensing technology.

Technology focusing on emotions

Skin-conductance sensors are widely used by psychologists and therapists in clinics, hospitals and so on. The Internet of Things (IoT) is implementing emotional ingredients in wristbands, too. Sensor technology allows gathering of data on heart rate, blood pressure and temperature to define an individual's emotional state.

Such emotion-based sensors have a wide range of applications and are easy to use at a relatively low cost. Smart watches and health wearables have already created a foundation for this technology that helps manage daily tasks while avoiding potential health issues and other problems. With such modern smart devices, users can track and evaluate their physical condition, access their reac-

tions to stress-inducing situations, and learn to manage stress and anxiety better.

These devices give instructions to users to practice mind-controlling techniques or breathing exercises, or to turn on relaxing music to help calm them down. Emotion-sensing technology and software supported by emotional artificial intelligence (AI) can read and analyse not only skin conductance, breathing and heart rate, but also eye movements, facial expressions, changes in voice and more. These do not necessarily require installing expensive hardware, but rather just some recognition software or additional code for computers or smartphones.

Growth of emotional intelligence technology is going to produce a number of focus areas that will sense emotions such as:

- Reflecting on a personal emotional experience
- Enabling actions and reactions to emotions
- Facilitating communication
- Turning emotions into experiences

Development highlights

Here are some interesting examples of the applications of emotion-sensing technology.

- A device that makes use of clothing lights up according to the wearer's mood has been developed at University of New South Wales, Sydney. It allows the user to com-

DIGITAL MULTIMETERS

801 JUNIOR

603 JUNIOR

HOLSTER WITH
MAGNET

TORCH LIGHT

TEST LEAD
GRIPPER

- 3½ Digit 6000 Counts (801 JUNIOR)
- 3½ Digit 1999 Counts (603 JUNIOR)
- LCD with Backlight
- TRMS Auto Ranging (801 JUNIOR)
- Manual Ranging (603 JUNIOR)
- Upto 1000V DC
- Upto 750V AC (TRMS in 801 JUNIOR)
- Upto 10A DC / AC (TRMS in 801 JUNIOR)
- 600Ω ~ 60MΩ (801 JUNIOR)
- 200Ω ~ 20MΩ (603 JUNIOR)
- Transistor Test [hFE] (603 JUNIOR)
- 60.00nF ~ 100.0mF (801 JUNIOR)
- 60.00Hz ~ 10.00MHz (801 JUNIOR)
- 1% ~ 99% Duty Cycle (801 JUNIOR)
- -20°C ~ 1000°C [-4°F ~ 1832°F] (801 JUNIOR)
- Data Hold, APO, NCV (Buzzer & RED LED), Diode Test (801 JUNIOR), Continuity Test (Buzzer & Red LED), Holster with Magnet, Torch Light, Test Lead Gripper

Meco Meters Private Limited

Plot No. EL-60, MIDC Electronic Zone,
TTC Industrial Area, Mahape,
Navi Mumbai - 400710 (INDIA)

Tel : 0091-22-2767 3300 (Board), 2767 3311-16 (Sales)
