

The Challenges In Testing DEFENCE EQUIPMENT

Test and measurement (T&M) equipment suppliers are required to deliver high-performance measurement solutions to cope with the increase in complexity in military electronic systems. Greater complexity in military electronic systems requires more capable T&M equipment to test those systems

DEEPSHIKHA SHUKLA

The electronics and technology used in military and defence need to be hundred per cent accurate. This increases the cost of testing. But in absence of testing, cost of failure is even higher. So, testing needs a heavy investment of time and cost.

Instruments used in open must ensure that the systems will operate as required even in the harshest of conditions. So the

defence system manufacturing industry needs to build highly efficient equipment that does not malfunction or get damaged in any condition. This is where sturdy electronic test equipment are required the most.

Latest technological developments in the defence sector have been possible due to substantial government investments in research and development
