

NAVIGATION SYSTEMS

Through Satellites And Radars

Global navigation satellite systems are not only becoming relevant for the economy, these are having a huge impact on the everyday lives of human beings

EFY BUREAU

Today, we use satellites instead of stars in the sky to figure out where we are and how to get to other places. The four global navigation satellite systems (GNSSes) are the US's Global Positioning System (GPS), Russia's GLObal NAVigation Satellite

System (GLONASS), the European Union's Galileo and China's BeiDou. Additionally, there are two regional systems: Japan's Quasi-Zenith Satellite System (QZSS), and Indian Regional Navigation Satellite System (IRNSS) or NAVigation with Indian Constellation
