

molecules in the food to vibrate, and the resulting friction with other water molecules causes it to heat up. It is most convenient for otherwise such time-consuming tasks as melting butter or heating water. This is why frozen and dry foods, such as rice, do not cook as efficiently in a microwave.

A safety switch exists in all modern microwave ovens; it shuts off all microwave energy whenever the oven door is opened. Microwaves have timers that automatically stop microwaving after a defined period of time. Modern ovens have programmed keypads, too. These also have removable racks and sensors that are designed to prevent over-cooking. During the summer season, microwave ovens are excellent to use because these would not heat up your kitchen the way other cooking appliances do.

Walls of the oven cavity are made of metal to reflect the radiation inwards toward the food. Microwave

energy absorbed by the food is converted to heat, so it does not contaminate the food. Sensors that detect

steam or temperature levels stop cooking at a certain point to prevent food from being dried out.

Tecno Systems India Electronics

229/195/A, Marsur, Kasaba Hobli, Chandapura-Anekal Road, Bengaluru - 562 106.

Make us the power behind your electronic

We undertake design and development of Printed Circuit Boards (PCBs), PCB Assembly, Box Build and after-market services like repair and rework both on turnkey and job work basis

Industries We Serve

Our Customer Centric approach, Quality Certifications (ISO 9001:2015 & AS 9100 Rev D) and KAIZEN Culture and Effective implementation of FMEA guarantees you the best product.

We are an Italian multinational with our own manufacturing facility in Bangalore, India. Our facility is equipped with state of the art machineries to cater to ever growing complex PCB assemblies, inspection & testing.

Let us get started. Talk to us today!
